Algebra Unit :

Representations of *-Algebras, Locally Compact Groups, and Banach *-Algebraic Bundles J. M.G. Fell, R. S. Doran, 1988-04-15 This is an all encompassing and exhaustive exposition of the theory of infinite dimensional Unitary Representations of Locally Compact Groups and its generalization to representations of Banach algebras. The presentation is detailed, accessible and self-contained except for some elementary knowledge in algebra, topology and abstract measure theory. In the later chapters the reader is brought to the frontiers of present day knowledge in the area of Mackey normal subgroup analysis and its generalization to the context of Banach Algebraic Bundles.

Cornell University Announcements Cornell University, 1920 *Representation Theory and Dynamical Systems* Anatolii Moiseevich Vershik, 1992 This volume presents research conducted between 1989 and 1991 by the participants in the Leningrad Seminar on representation theory, dynamical systems and their applications, headed by A M Vershik. The primary areas covered here are mathematical physics, Lie groups and their representations, infinite dimensional groups, topology and dynamical systems. The book contains a number of useful introductory surveys; for example, one paper by Vaksman and Soibelman provides a systematic description of the theory of quantum groups in the spirit of representation theory, a new and popular area for which there are few introductory surveys. A portion of the book is devoted to adic transformations and substitutions, a new area of ergodic theory. With a balance of survey papers and frontier research results, this book will appeal to graduate students and researchers alike.
