Building Time David Leatherbarrow, 2020-11-26 While most books on architecture concentrate on spatial themes this book explores architecture's temporal dimensions Through a series of close readings of buildings both contemporary and classic it demonstrates the centrality of time in modern architecture and shows why an understanding of time is critical to understanding good architecture All buildings exist in time Even if designed for permanence they change slowly but inevitably They change use they accrue history and meaning they decay all of these processes are inscribed in time So too is the path traced by the sun through a building and the movements of the human body from room to room Time this book argues is the framework for our spatial experience of architecture and a key dimension of a building's structure and significance Building Time presents twelve close readings of buildings and artworks which explore this idea Examining works by distinctive modern architects from Eileen Gray to Ivaro Siza and Wang Shu it takes the reader in some cases literally step by step through a built work and provides insightful reflections on the importance of making space for time in architectural design This is a book for both theorists and for architectural designers Through it theorists will find a way to rethink the fundamental premises and aims of design work while designers will rediscover the order and ideas that shape the world around them its buildings interiors and landscapes

Performance-Oriented Architecture Michael Hensel, 2013-05-20 Architecture is on the brink It is a discipline in crisis Over the last two decades architectural debate has diversified to the point of fragmentation and exhaustion What is called for is an overarching argument or set of criteria on which to approach the design and construction of the built environment Here the internationally renowned architect and educator Michael Hensel advocates an entirely different way of thinking about architecture By favouring a new focus on performance he rejects longstanding conventions in design and the built environment This not only bridges the gap between academia and practice but even more significantly the treatment of form and function in design It also has a far reaching impact on knowledge production and development placing an important emphasis on design research in architecture and the value of an interdisciplinary approach Though performance first evolved as a concept in the humanities in the 1940s and 1950s it has never previously been systematically applied in architecture in an inclusive manner Here Michael Hensel offers Performance Orientated Architecture as an integrative approach to

architectural design the built environment and questions of sustainability He highlights how core concepts and specific traits such as climate material performance and settlement patterns can put architecture in the service of the natural environment A wide range of examples are cited to support his argument from traditional sustainable buildings such as the Kahju Bridge in Isfahan and the Topkap Palace in Istanbul to more contemporary works by Cloud 9 Foreign Office Architects Steven Holl and OCEAN
