Research on Teaching and Learning Probability Carmen Batanero, Egan J.

Chernoff, Joachim Engel, Hollylynne S. Lee, Ernesto Sánchez, 2016-07-12 This book summarizes the vast amount of research related to teaching and learning probability that has been conducted for more than 50 years in a variety of disciplines. It begins with a synthesis of the most important probability interpretations throughout history: intuitive, classical, frequentist, subjective, logical propensity and axiomatic views. It discusses their possible applications, philosophical problems as well as their potential and the level of interest they enjoy at different educational levels. Next the book describes the main features of probabilistic thinking and reasoning including the contrast to classical logic, probability language features, the role of intuitions as well as paradoxes and the relevance of modeling. It presents an analysis of the differences between conditioning and causation, the variability expression in data as a sum of random and causal variations as well as those of probabilistic versus statistical thinking. This is followed by an analysis of probability's role and main presence in school curricula and an outline of the central expectations in recent curricular guidelines at the primary, secondary and high school level in several countries. This book classifies and discusses in detail the three different research periods on students' and people's intuitions and difficulties concerning probability: early research focused on cognitive development; a period of heuristics and biases; programs and the current period marked by a multitude of foci, approaches and theoretical frameworks

Fuzzy Systems and Data Mining IV Antonio J. Tallón-Ballesteros, Kaicheng Li, 2018-11-15. Big Data Analytics is on the rise in the last years of the current decade. Data are overwhelming the computation capacity of high performance servers. Cloud, grid, edge and fog computing are a few examples of the current hype. Computational Intelligence offers two faces to deal with the development of models on the one hand the crisp approach which considers for every variable an exact value and on the other hand the fuzzy focus which copes with values between two boundaries. This book presents 114 papers from the 4th International Conference on Fuzzy Systems and Data Mining (FSDM 2018) held in Bangkok, Thailand from 16 to 19 November 2018. All papers were carefully reviewed by program committee members who took into consideration the breadth and depth of the research topics that fall within the scope of FSDM. The acceptance rate was 32.85%. Offering a state of the art overview of fuzzy systems and data mining, the publication will be of interest to all those whose work involves data science.
