Mader, 2000-07 **The Latest and Best of TESS**, 1991 **Exploring Causal Risk Factors for Metabolic and Endocrine Disorders** Youxin Wang, Xiao Wang, Haifeng Hou, Di Liu, 2024-02-15 Metabolic and endocrine disorders are the main burden of noncommunicable chronic diseases and they serve as important risk factors for cardiovascular diseases or multiple cancers To date a large number of correlates have been identified but few of them were modifiable and causal In general causal relationships can be conceptualized not only in a probabilistic sense involving statistical terms and procedures but also in the complexity of biological phenomena The limited understanding of many underlying mechanisms hinders a deterministic conceptualization of disease causation The identification of modifiable risk factors that have a causal effect on the incidence of these diseases and their complications is critical to the primary or secondary prevention of metabolic and endocrine diseases Essential Psychology Philip Banyard, Mark N.
