

Photosynthesis

The steps

1

Light Absorption

Plant leaves contain a pigment called chlorophyll, which absorbs sunlight.

2

CO₂ Uptake

Carbon dioxide is taken in by plants through tiny openings on leaves called stomata.

3

Water Uptake

Plants absorb water from the soil through their roots and transport it to the leaves.

4

The Reaction

Photosynthesis occurs in chloroplasts, where sunlight energy is used to transform water and carbon dioxide into glucose and oxygen.

5

Glucose Production and Oxygen Release

Photosynthesis produces glucose, which is the primary source of energy for plants, and releases oxygen as a byproduct through stomata into the air.
