13 Arcs In Circles:

Optimizing Crossings in Circular-Arc Drawings and Circular Layouts Myroslav Kryven, 2022 A graph is an abstract network that represents a set of objects called vertices and relations between these objects called edges. Graphs can model various networks. For example, a social network where the vertices correspond to users of the network and the edges represent relations between the users. To better see the structure of a graph, it is helpful to visualize it. A standard visualization is a node-link diagram in the Euclidean plane. In such a representation, the vertices are drawn as points in the plane and edges are drawn as Jordan curves between every two vertices connected by an edge. Edge crossings decrease the readability of a drawing, therefore, Crossing Optimization is a fundamental problem in Computer Science. This book explores the research frontiers and introduces novel approaches in Crossing Optimization.
