

## 16.4 Evidence of Evolution

### Lesson Objectives

- Explain how geologic distribution of species relates to their evolutionary history.
- Explain how fossils and the fossil record document the descent of modern species from ancient ancestors.
- Describe what homologous structures and embryology suggest about the process of evolutionary change.
- Explain how molecular evidence can be used to trace the process of evolution.
- Explain the results of the Grants' investigation of adaptation in Galápagos finches.

### Lesson Summary

**Biogeography** Biogeography is the study of where organisms live now and where they and their ancestors lived in the past. Two biogeographical patterns are significant to Darwin's theory:

- ▶ The first is a pattern in which closely related species differentiate in slightly different climates. The Galápagos tortoises and finches follow this pattern.
- ▶ The second is a pattern in which very distantly related species develop similarities in similar environments. The rheas, ostriches, and emus fall into this pattern.

### The Age of Earth and Fossils

- ▶ Radioactive dating techniques have confirmed that Earth is ancient—approximately 4.5 billion years old.
- ▶ Recent fossil finds document intermediate stages in the evolution of many groups, including whales, birds, and mammals.

### Comparing Anatomy and Embryology

- ▶ Homologous structures are shared by related species and have been inherited from a common ancestor. Similarities and differences among homologous structures help determine how recently two groups shared a common ancestor.
  - Body parts that share a common function, but neither structure nor common ancestry, are called analogous structures. Analogous structures do not provide any evidence for evolutionary descent.
  - Homologous structures that are greatly reduced in size or have little to no function are called vestigial structures.
  - Many homologous structures develop in the same order and in similar patterns during the embryonic, or pre-birth, stages of related groups. These similarities provide further evidence that the animals share common ancestors.

**Genetics and Molecular Biology** At the molecular level, the universal genetic code and homologous molecules such as genes and proteins provide evidence of common descent.

**Testing Natural Selection** Scientists have designed experiments to test natural selection. Observations of Galápagos finches confirm that competition and environmental change drive natural selection.

**Evidences for God and His Creations: Nature, the Flood, and the Bible** Dr. T. J. Tofflemire, 2011-07-21 This book provides summary apologetics from about 200 references. It is unique in that many authors with differing viewpoints are put together in brief key point summaries. Some of the books covered are 1100 pages long. The original authors' views are briefly integrated and compared. The different views of creation are also discussed and compared and given a open minded weighing. Are you concerned about the fact that 70% of our youth no longer attend church and do not have a biblical world view? The naturalistic or humanistic world view they adopt from schooling favors the following: 1. Man evolved from primates and is a biological machine with no purpose. 2. There is no source of true morals and thus morals are relative and determined by whatever a given group decides or whatever is most popular. 3. Since man is only an animal there is no basis for individual human rights only rights for the masses. There are some good arguments provided in the book to counter all of this and provide a biblical world view. These arguments are brief and easy to share in witnessing situations.

*Controversy and Confrontation* Frans H. van Eemeren, Frans Hendrik Eemeren, Bart Garssen, 2008 The essays that are collected in *Controversy and Confrontation* provide a closer insight into the relationship between controversy and confrontation that deepens our understanding of the functioning of argumentative discourse in managing differences of opinion. Their authors stem from two backgrounds. First the controversy scholars Dascal, Marras, Euli, Regner, Ferreira and Lessl discuss historical controversies in science both from a theoretical and an empirical perspective. Saim concentrates on a historical controversy. Fritz provides a historical perspective on controversies by analyzing communication principles. Second the argumentation scholars Johnson, van Laar, van Eemeren, Garssen and Meuffels address theoretical or empirical aspects of argumentative confrontation. Aakhus and Vasilyeva examine argumentative discourse from the perspective of conversation analysis. Jackson analyzes argumentative confrontation in a recent debate between scientists and politicians. Last but not least two contributors, Kutrovitz and Zemplén make an attempt to bridge the study of historical controversy and the study of argumentation.

*Journey of a Believer* Bob Reinsch, 2023-12-05 A map almost ruined our honeymoon. It was our second day of marriage and as we were driving up the Olympic Peninsula to Port Angeles I found it difficult to read the map and drive at the same time. So I handed the map to my Debbie and asked her to tell me where to turn. As a new believer I felt like Debbie. Someone hands you a Bible and expects you to know how to read it. Jesus had transformed me into a new creation but I was a baby who did childish things and needed a parent to nurture me along and stimulate my spiritual development. I hope that in a way I can be that for you as you read the lessons I learned in my pursuit to be a follower of Christ such as learning to effectively tell people how Jesus changed my life becoming consistent in spending time alone with God letting prayer be a vital part of my life discovering what helps grow my faith finding an easy way to study the

Bible and mastering sin in my life I thank my heavenly Father and Lord Jesus for my journey because with each lesson I have grown closer to Them As that intimacy deepens so does the longing to be with Them in heaven My prayer is that this will happen to you as I share my journey with you     **GOD SAW YOU** Robert E. Carpenter D.D.S,2025-08-11 In God Saw You Dr Carpenter takes the reader through a fascinating journey that focuses on the modern sciences of genetics and biochemistry uniting them with the mysteries of the kingdom of God Over 1 400 footnotes are presented on the page referring to them so the reader has immediate access to the truths presented Modern science and the Holy Scriptures conflict with each other On these pages the battle lines are reduced unapologetically from assumptions possibilities hypotheses and theories to raw truths many of which you might find to be inconvenient The author finds an amazing number of scriptures that deal with genetics ranging from simple concepts such as seeds and conception to complex references to DNA and the human genome The book's real pay dirt is when he reveals the beautiful spiritual truths that are metaphorically parallel to these physical sciences This is the true sense of the word apocalypse meaning an unveiling The entire Bible is an apocalypse an unveiling of who God is His kingdom His expectations and all of history past present and future This book does just that lifting the veil off of familiar scriptures and revealing the rich and thrilling images previously hidden in the mysteries of God's Word Get ready to see into the mind of God as He planned and programmed your genome As King David said in Psalm 139 Your eyes saw my substance being yet unformed and in Your book they all were written when as yet there were none of them How precious also are Your thoughts to me O God How great is the sum of them Yes God actually Saw You And when you see that you will never be the same again     **Instructor's Manual for Understanding Biology** Philip Applewhite, Samuel Wilson, 1978
