

BUNGEE DROP

1. **DESCRIPTION:** Each team will design one "elastic" cord to conduct two separate "drops" at a given height(s) and attempt to get a drop mass placed in a bottle as close as possible to, but without touching, a landing surface (plane).

A TEAM OF UP TO: 2

IMPOUND: Yes

TIME: approximately 15 minutes

2. **EVENT PARAMETERS:**

- a. Teams must provide one "elastic" cord to be used for both drops that terminates with a closed metal ring approximately 1/2 to 1 inch in diameter (e.g., a key ring) that will not open and may bring their own measuring devices, to confirm heights, length or mass during the time given for preparing their two drops.
- b. Supervisors will supply a drop mass (50-300 grams) that will be placed in a 300-591 mL plastic bottle and is the same for both drops, an attachment mechanism (hook, clasp, carabiner, etc.) that will connect the team's bottom cord ring to the bottle and a top anchoring system/extended platform with a release mechanism (e.g., a clamp) to attach the top end of the elastic cord, which all teams must use. At Regionals, the mass will be in multiples of 25 grams, at State the mass will be in multiples of 10 grams, and at Nationals it may be any mass. The bottle's total mass value and length, including the attachment mechanism, will be posted immediately after impound.
- c. Supervisors must provide an accurate system for determining how close a team's device came to the landing surface (plane), and whether or not it touched. Some successful methods for determining the closeness of a drop to the landing surface (plane) include multiple spotters or digital video cameras. Possible methods for determining whether the device touched or broke the landing surface (plane) include a carbon paper drop area or a very fine powder landing area.

3. **THE COMPETITION:**

- a. The Drop: Teams will be given a total of 5 minutes to prepare their device in the holding area, followed immediately by 5 minutes to complete both drops.
- b. The drop heights: both "drop heights" will be between 2-5 meters (at Nationals the drop heights will be between 5-10 m). At Regionals and State the 2nd drop height may be the same or different. At National the drop heights will be different. The exact height from which the drop must occur will be verified by at least two separate measurements by the supervisor. The drop height values and drop instructions will be posted immediately after impound.
- c. Elastic cords must be impounded prior to posting the bottle's length and total drop mass value and drop height(s). No physical alterations may be made to the elastic cord once it has been impounded (with the exception of marking drop locations on the cord before the drops). Any team that fails the "elasticity test" will be allowed to compete, but will be ranked behind all teams which pass the test. The cord may consist of more than one material (contest rubber, nylon, latex tubing, thread, sewing elastic, metal springs, etc.) and more than one strand as long as it meets the elasticity test. The operational definition of elasticity for this event is: while being suspended vertically, the bottom meter of the cord must stretch to at least 1.25 meters when a single 500g mass is attached to this section and return to approximately its original length after the mass is removed. "Self-limiting-brake" mechanisms such as a separate, parallel, non-elastic strand that "brakes" the fall of the mass with little to no rebound are not permitted.

4. **SCORING:**

- a. The final score will be the sum of the distances between the lowest point of the bottle and the surface (plane) for each drop. The team with the lowest total distance for the two drops will be the winner.
- b. Teams with one drop that touches the landing surface (plane) will be ranked below those that have no touches. Teams with two touches will be ranked below those teams with one touch. Teams that failed the elasticity test will rank below all those that passed the elasticity test.
- c. If there is a tie, the team with the single best drop overall (closest to the landing surface (plane) on either drop) will win. Second tiebreaker is the cord with the greatest stretch in the elasticity test.

2014 Rules Science Olympiad:

Introduction to Curriculum Design in Gifted Education Kristen R. Stephens, Frances A. Karnes, 2021-09-03 Gifted students require a curriculum that intentionally aligns with their advanced abilities to ensure engagement at the appropriate level of intensity and depth. *Introduction to Curriculum Design in Gifted Education* offers an in-depth exploration of curriculum development for the gifted. Included are the general foundations of good curriculum design, a survey of curriculum models appropriate for gifted learners, an examination of design considerations across content areas, a detailed analysis of the role assessment has in the curriculum development process, and an exploration of trends and future directions of curriculum development for the gifted. Each chapter is authored by experts with considerable knowledge pertaining to curriculum implications for gifted students and is written with the practitioner in mind to facilitate effective implementation. This text is an essential addition to the library of any educator seeking to create new and/or adapt existing curriculum to better address the interests and abilities of gifted students. *International Perspectives on Science Education for the Gifted* Keith S. Taber, Manabu Sumida, 2016-04-28 In the spirit of encouraging international dialogue between researchers and practitioners often working within isolated traditions, this book discusses perspectives on science education for the gifted informed by up-to-date research findings from a number of related fields. The book reviews philosophy, culture, and programmes in science education for the gifted in diverse national contexts and includes scholarly reviews of significant perspectives and up-to-date research methods and findings. The book is written in a straightforward style for students studying international perspective modules on undergraduate but especially masters and doctoral degrees in Science Education and Gifted Education. Gifted education has come to be regarded as a key national programme in many countries, and gifted education in science disciplines is now of major importance to economic and technological development. Despite these national initiatives and developments, there are very few discussions on gifted education in science from international perspectives. This will be a valued addition to the scholarship in this emergent field. United States of America Congressional Record, Proceedings and Debates of the 113th Congress Second Session Volume 160 - Part 4, NAGC Pre-K-Grade 12 Gifted Education Programming Standards Susan, K. Johnsen, Debbie Dailey, Alicia Cotabish, 2022-01-31 The Pre-K Grade 12 Gifted Education Programming Standards should be part of every school district's repertoire of standards to ensure that the learning needs of advanced students are being met. The new edition of this popular book helps schools understand the updates to the standards which have a renewed emphasis on equity and inclusion. The six standards focus on student outcomes in learning and development, assessment, curriculum planning, and instruction, learning environments, programming, and professional learning, updated from professional development used in the 2010 version. This book details these standards and provides suggestions for implementing each one. It also includes sample assessments of student products and performances which will assist schools in developing program and service evaluation benchmarks. This book is a must-have for school leaders and gifted
