Good Houses David Kroll, Veronica Soebarto, Arianna Brambilla, Ehsan Sharifi, 2025-12-30. Good Houses brings together the design process, building science and the environmental systems that can be used by both teachers and students in teaching and learning about designing good, responsible houses. The book approaches housing design holistically by taking its environment as the starting point, integrating design processes.

more closely with architectural science and environmental systems Any building design can only be successful if these two aspects among others are considered as early as possible in the design process and inform the designer throughout the design process The book does not provide prescriptions or definitive answers on what is the best way to design a house Instead it aims to provide a structured way of what to consider at the different stages of the design process and the potential implications of the decisions made throughout this process It aligns sustainable design principles with the stages in the design process and provides guidance on how these can be connected Using international examples to illustrate the concepts from a wide range of climatic conditions the book is illustrated in full colour with over 200 plans sections diagrams and photographs It is essential reading for those designing residential projects
