Monson-Haefel,2007-06-26 This book is a thorough introduction to Java Message Service JMS the standard Java application  
program interface API from Sun Microsystems that supports the formal communication known as messaging between  
computers in a network JMS provides a common interface to standard messaging protocols and to special messaging services  
in support of Java programs The messages exchange crucial data between computers rather than between users information  
such as event notification and service requests Messaging is often used to coordinate programs in dissimilar systems or  
written in different programming languages Using the JMS interface a programmer can invoke the messaging services of  
IBM s MQSeries Progress Software s SonicMQ and other popular messaging product vendors In addition JMS supports  
messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging  
is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients  
work by sending messages to a message server which is responsible for delivering the messages to their destination Message  
delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The  
contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java  
Message Service shows how to build applications using the point to point and publish and subscribe models how to use  
features like transactions and durable subscriptions to make an application reliable and how to use messaging within  
Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses  
integration of messaging into J2EE    The Mechanical Engineer's Pocket-book William Kent,1895    **The Building
