The Question of Being in Western and African Analytic Metaphysics Grivas Muchineripi Kayange, 2021-05-04 The main aim of this book is to discuss fundamental developments on the question of being in Western and African philosophy using analytic metaphysics as a framework It starts with the two orthodox responses to the question of being namely the subject verb object language view and the rheomodic language view In the first view being is conceived through the analysis of language structure where it is represented by subjects particulars objects and relations often universals In the second view there are different variations however the common idea is that the world's structure is revealed in the root verb of terms This suggests a holistic and dynamic conception of being where everything is in a continuous process of action The book builds on analytic philosophy and explores metaphysical concepts such as space time modality causation indeterminism versus determinism and mind and body The book shows that in both Western and African thought i similarities in different studies confirm that philosophy is a universal activity ii differences within a context and beyond confirm the perspectival nature of human knowledge as individuals attempt to interpret reality and iii language influences the conceptualization of being in a particular area One of the novel aspects is the development of visual and mathematical African models of space and time

System Theory in Geomorphology Kirsten von Elverfeldt, 2012-03-13 This study in geomorphology regards systems as open but at the same time operationally closed as self organized structure building and potentially self referential Uses state of the art systems theory as a bridge to Human Geography and related studies

Introduction to the Mathematics of Computer Graphics Nathan Carter, 2016-12-31 This text by an award winning Author was designed to accompany his first year seminar in the mathematics of computer graphics Readers learn the mathematics behind the computational aspects of space shape transformation color rendering animation and modeling The software required is freely available on the Internet for Mac Windows and Linux The text answers questions such as these How do artists build up realistic shapes from geometric primitives What computations is my computer doing when it generates a realistic image of my 3D scene What mathematical tools can I use to animate an object through space Why do

movies always look more realistic than video games Containing the mathematics and computing needed for making their own 3D computer generated images and animations the text and the course it supports culminates in a project in which students create a short animated movie using free software Algebra and trigonometry are prerequisites calculus is not though it helps Programming is not required Includes optional advanced exercises for students with strong backgrounds in math or computer science Instructors interested in exposing their liberal arts students to the beautiful mathematics behind computer graphics will find a rich resource in this text Applications of Quantum Mechanical Techniques to Areas Outside of Quantum Mechanics. 2nd Edition Emmanuel Haven, Andrei Khrennikov, 2019-11-14 This book deals with applications of quantum mechanical techniques to areas outside of quantum mechanics so called quantum like modeling Research in this area has grown over the last 15 years But even already more than 50 years ago the interaction between Physics Nobelist Pauli and the psychologist Carl Jung in the 1950 s on seeking to find analogous uses of the complementarity principle from quantum mechanics in psychology needs noting This book does NOT want to advance that society is quantum mechanical The macroscopic world is manifestly not quantum mechanical But this rules not out that one can use concepts and the mathematical apparatus from quantum physics in a macroscopic environment A mainstay ingredient of quantum mechanics is quantum probability and this tool has been proven to be useful in the mathematical modelling of decision making In the most basic experiment of quantum physics the double slit experiment it is known from the works of A Khrennikov that the law of total probability is violated It is now well documented that several decision making paradoxes in psychology and economics such as the Ellsberg paradox do exhibit this violation of the law of total probability When data is collected with experiments which test non rational decision making behaviour one can observe that such data often exhibits a complex non commutative structure which may be even more complex than if one considers the structure allied to the basic two slit experiment The community exploring quantum like models has tried to address how quantum probability can help in better explaining those paradoxes Research has now been published in very high standing journals on resolving some of the paradoxes with the mathematics of quantum physics The aim of this book is to collect the contributions of world s leading experts in quantum like modeling in decision making psychology cognition economics and finance **Theory of Knowledge** Bertrand Russell, 2013-04-15 Theory of Knowledge gives us a picture of one of the great minds of the twentieth century at work It is possible to see the unsolved problems left without disguise or evasion Historically it is invaluable to our understanding of both Russell s own thought and his relationship with Wittgenstein **El-Hi Textbooks and Serials in Print** ,2003
