Geometries on Surfaces Burkard Polster, Gu nter Steinke, 2001-10-03 The projective M bius Laguerre and Minkowski planes over the real numbers are just a few examples of a host of fundamental classical topological geometries on surfaces This book summarizes all known major results and open problems related to these classical point line geometries and their close nonclassical relatives Topics covered include classical geometries methods for constructing nonclassical geometries classifications and characterizations of geometries This work is related to many other fields including interpolation theory convexity the theory of pseudoline arrangements topology the theory of Lie groups and many more The authors detail these connections some of which are well known but many much less so Acting both as a reference for experts and as an accessible introduction for graduate students this book will interest anyone wishing to know more about point line geometries and the way they interact

Lie Groups and Symmetric Spaces Semen Grigor'evich Gindikin, 2003 The book contains survey and research articles devoted mainly to geometry and harmonic analysis of symmetric spaces and to corresponding aspects of group representation theory The volume is dedicated to the memory of Russian mathematician F I Karpelevich 1927 2000 Of particular interest are the survey articles by Sawyer on the Abel transform on noncompact Riemannian symmetric spaces and by Anker and Ostellari on estimates for heat kernels on such spaces as well as the article by Bernstein and Gindikin on integral geometry for families of curves There are also many research papers on topics of current interest The book is suitable for graduate students and research mathematicians interested in harmonic analysis and representation theory

The Quarterly Journal of Pure and Applied Mathematics James Joseph Sylvester, 1860 *Mathematical Sciences with Multidisciplinary Applications* Bourama Toni, 2016-08-19 This book is the fourth in a multidisciplinary series which brings together leading researchers in the STEAM H disciplines Science Technology Engineering Agriculture Mathematics and Health to present their perspective on advances in their own specific fields and to generate a genuinely interdisciplinary collaboration that transcends parochial subject matter boundaries All contributions are carefully edited peer reviewed reasonably self contained and pedagogically crafted for a multidisciplinary readership Contributions are drawn from a variety

of fields including mathematics statistics game theory and behavioral sciences biomathematics and physical chemistry computer science and human centered computing This volume is dedicated to Professor Christiane Rousseau whose work inspires the STEAM H series in recognition of her passion for the mathematical sciences and her on going initiative the Mathematics of Planet Earth paradigm of interdisciplinarity The volume s primary goal is to enhance interdisciplinary understanding between these areas of research by showing how new advances in a particular field can be relevant to open problems in another and how many disciplines contribute to a better understanding of relevant issues at the interface of mathematics and the sciences The main emphasis is on important methods research directions and applications of analysis within and beyond each field As such the volume aims to foster student interest and participation in the STEAM H domain as well as promote interdisciplinary research collaborations The volume is valuable as a reference of choice and a source of inspiration for a broad spectrum of scientists mathematicians research students and postdoctoral fellows
