

A feature of all modern models of the Volkswagen concern is the lack of a self-diagnostic function on the instrument cluster and the display of error codes on the panel. To read the existing faults on the Volkswagen cars release after 1995, the diagnostic cord and the program installed on the computer or laptop are used.

On many machines, for example, Golf 4 or Passat B5, a self-test of the systems was applied with information displayed in German or English on the instrument cluster screen. For the first time such a function was installed on the 4th generation Golf cars in 1997. No manipulation is required to read the error codes. When the engine starts, it polls all the systems and control units of the vehicle. If a malfunction is detected, information about it is displayed in text format on the screen and is complemented by a flashing or lit indicator. In this case, the signal may be yellow or red (high level of importance) color.

Messages of high importance are complemented by a triple beep, the rest - once. For example, if the oil level drops, an inscription will appear and the oiler icon will flash. If you are unable to remove the error yourself (topping up the oil, coolant or windshield fluid or filling the tank), you should carry out computer diagnostics of the car, which will allow you to accurately determine the cause of the fault.
