Les véhicules hybrides François Badin,2013

L augmentation rapide de la population mondiale et des besoins associés en énergie a puisement annoncé des ressources énergétiques fossiles et la hausse continue des émissions de gaz effet de serre GES avec les modifications climatiques qu'elle induit sont parmi les défis majeurs que nous aurons à affronter dans les années et les décennies à venir. Dans ce contexte, l'hybridation des motorisations constitue typiquement une technologie de transition permettant d'améliorer sensiblement les performances énergétiques et environnementales des véhicules actuels sans modifier profondément leurs typologies d'utilisation tout en ouvrant la voie de nouveaux modes de propulsion pour le plus long terme. Les motorisations hybrides constituent un sujet complexe nécessitant une approche multidisciplinaire. Cet ouvrage qui se veut exhaustif traite du véhicule des composants de leur association et de leur fonctionnement ainsi que des bilans globaux établis sur la vie du véhicule. Il débute par une présentation générale des différentes conditions d'utilisation des véhicules qui permettront au lecteur d'appréhender les enjeux liés au développement des véhicules hybrides et les méthodes utilisées pour comparer les performances des différentes solutions. Sont ensuite développés les principes et l'utilisation de la motorisation thermique et de la motorisation électrique, les systèmes de stockage de l'énergie embarqués, les principes architecturaux, les composants spécifiques et la fonctionnalité des motorisations hybrides, ainsi que la gestion de l'énergie dans ces véhicules. Une analyse globale de différentes motorisations en cycle de vie ACV (coûts totaux et disponibilité en matériaux sensibles) est aussi présente. Après avoir pris connaissance de cet ouvrage, le lecteur disposera des bases qui lui permettront d'appréhender les technologies liées au concept d'hybridation, leur mise en œuvre, leurs bilans et leurs conditions de diffusion.
