Food and Agriculture Organization of the United Nations,2023-09-18 Agrifood value chains of small and medium sized
producers in the Near East and North Africa region have the potential to generate more value through improved access to
high value markets Limited logistics capacity in the region coupled with lack of access to continuous cold chain has resulted
in weak supply chain management high level of food loss lack of compliance with food quality and safety standards
information asymmetries and unfair value distribution affecting income and livelihood of small and medium sized producers
Improving traceability and transparency along the agrifood value chains can help building consumers trust by better tracking
the origin of food identifying detecting and mitigating the impact of food safety and quality issues in a timely manner and
enhancing price visibility and information sharing on value distribution in each stage of the value chain Digital technologies
can play an important role in enhancing traceability and transparency by ensuring the collection of comprehensive consistent
and reliable data along the supply chain real time tracking easy aggregation integration analysis and sharing of data Despite
the recognition of game changing potential few studies have analysed the feasibility of application of these technologies to
improve traceability and transparency of value chains from farm gate to market in the region To fill this gap in knowledge
