Computational Economic Analysis for Engineering and Industry Adedeji B. Badiru, Olufemi A.

Omitaomu, 2007-06-07 Recent global anxiety indicates that more focus needs to be directed at economic issues related to industry. Conventional techniques often do not adequately embrace the integrated global factors that affect unique industries and industry focused computational tools have not been readily available. Until now Computational Economic Analysis for Engi

FCS Economic Environment L3 ,2008 The European Union and the Technology Shift Antonina

Bakardjieva Engelbrekt, Karin Leijon, Anna Michalski, Lars Oxelheim, 2021-02-08 This book explores the multiple challenges that the global technology shift is posing to the EU. It raises the question of how European societies will mobilize the positive effects of the rapid technological advancement in digitalization, robotization and artificial intelligence while mitigating the negative consequences in terms of job losses, cybercrime and social and political polarization. From the vantage point of experts from economics, law and political science, this book provides insights into the role that the EU is and ought to be playing in regulating global platform companies addressing taxation in the digital economy, mitigating job displacements on the labour market and tackling ethical concerns of artificial intelligence and the prospect of digital democracy. All chapters are based on up to date research findings, succinct assessment of the current state of affairs and ongoing debates. They conclude with policy recommendations for policy makers on European and national levels. This volume has a solid foundation in the highly topical question of technological change. More importantly, the individual chapters are written by qualified scholars whose analytically advanced contributions are likely to interest a wide audience. I can strongly recommend this book for scholars and students in political science, law and economics. Carl Fredrik Bergström, Professor of European Law, Uppsala University, Sweden. When the Commission took office in 2019, it put forward its vision as to how Europe's digital future could be shaped in a way that makes the digital transition enrich people's lives and make sure that European businesses fully benefit from the opportunities offered by digital technologies. Then COVID drastically accelerated the take up of digital solutions. As the digital transformation affects every single one of us, it is important that we have the widest possible debate on its inherent risks and opportunities. This is why I warmly recommend this book. It brings together an interdisciplinary set of scholars able to analyse the multifaceted implications of the technological shift. And I could not agree more with the book's main takeaway, i.e. that we need to create an adaptive regulatory framework capable of harnessing the positive effects of technological changes while buttressing the negative impact on European society and citizens. Nature-based solutions for climate change adaptation Andrea Ghermandi, Nalini Rao, Emma Ferranti, Petina Pert, 2025-11-10 Climate change poses complex challenges to the world in the form of extreme weather such as increased precipitation droughts flooding and heat waves. These risks have significant impacts on ecosystems and communities which vary depending on their baseline vulnerability. These include risks to human life, human health, property, infrastructure, ecosystem health, and access to water and energy. Climate change adaptation becomes crucial in adjusting to life under these changing conditions. Some examples of adaptation include integrating robust and flexible operations, modifying infrastructure, managing the timing of engineering activities, capacity building, managing disaster risks, modifying ecosystem or community-based approaches, strengthening stakeholders for decision making, designing new financing mechanisms, and using data-driven methods to improve resilience. One important area of focus for climate adaptation is Nature-based Solutions (NbS). Nature-based Solution NbS refers to a suite of activities that integrate natural ecosystems and processes into various systems. The drivers for integration can include increasing efficiency, improving environmental impacts, creating multiple benefits, and reducing resource use. To name a few, NbS activities have been used to upgrade water systems, reduce heat island effects, improve stormwater management, green infrastructure building, and upgrading efforts, and provide multiple benefits to both ecosystems and communities. While NbS is not a novel concept, more research on the conceptual and technical aspects is needed to form a strong foundation from which applications can be designed. Research on the potential of NbS activities for specific climate change adaptation needs could unveil key insights in applicability, measurement, effectiveness, and scalability. The types of research needed to address climate change adaptation through NbS are very wide-ranging. The presentation of conceptual frameworks and links between NbS and similar concepts, including ecosystem services, ecosystem-based adaptation, green infrastructure, and passive treatment, is important to articulate and clarify for use and integration in the climate adaptation context. Evaluating the targeted implementation of NbS across landscapes, coastal regions, and watersheds, as well as exploring its applicability in sectors like energy, water, forestry, agriculture, industry, and the public sector, are crucial areas of investigation. Specific analysis of NbS designed to address critical risks such as floods, droughts, hurricanes, and heatwaves could bring insights to different regions around the world. Technical studies encompassing hydrology, pollution
