*Artificial Neural Networks in Water Supply Engineering* Srinivasa Lingireddy, Gail M. Brion, 2005-01-01 Prepared by the Water Supply Engineering Technical Committee of the Infrastructure Council of the Environmental and Water Resources Institute of ASCE This report examines the application of artificial neural network ANN technology to water supply engineering problems Although ANN has rarely been used in this area those who have done so report findings that were beyond the capability of traditional statistical and mathematical modeling tools This report describes the availability of diverse applications along with the basics of neural network modeling and summarizes the experiences of groups of researchers around the world who successfully demonstrated significant benefits from using ANN technology in water supply engineering Topics include Forecasting salinity levels in River Murray South Australia Predicting gastroenteritis rates and waterborne outbreaks Modeling pH levels in a eutrophic Middle Loire River France and ANNs as function approximation tools replacing rigorous mathematical simulation models for analyzing water distribution networks

## **Soft Computing in Water Resources Engineering**

G. Tayfur, 2014-11-02 Engineers have attempted to solve water resources engineering problems with the help of empirical regression based and numerical models Empirical models are not universal nor are regression based models The numerical models are on the other hand physics based but require substantial data measurement and parameter estimation Hence there is a need to employ models that are robust user friendly and practical and that do not have the shortcomings of the existing methods Artificial intelligence methods meet this need Soft Computing in Water Resources Engineering introduces the basics of artificial neural networks ANN fuzzy logic FL and genetic algorithms GA It gives details on the feed forward back propagation algorithm and also introduces neuro fuzzy modelling to readers Artificial intelligence method applications covered in the book include predicting and forecasting floods predicting suspended sediment predicting event based flow hydrographs and sedimentographs locating seepage path in an earth fill dam body and the predicting dispersion coefficient in natural channels The author also provides an analysis comparing the artificial intelligence models and contemporary non artificial intelligence methods empirical numerical regression etc The ANN FL and GA are fairly new methods in water resources engineering The first publications appeared in the early 1990s and quite a few studies followed in the early 2000s Although these methods are currently widely known in journal publications they are still very new for many scientific readers and they are totally new for students especially undergraduates Numerical methods were first taught at the graduate level but are now taught at the undergraduate level There are already a few graduate courses developed on AI methods in engineering and included in the graduate curriculum of some universities It is expected that these courses too will soon be taught at the undergraduate levels
