*Cooling and Heating Load Calculation Manual*, 1980      *Cooling and Heating Load Calculation Manual* Faye C. McQuiston, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Jeffrey D. Spitler, 1992 Provide a comprehensive source of theory procedures and data for cooling and heating load calculations for other than residential buildings      *Cooling and Heating Load Calculation Manual* Faye C. McQuiston, 1994      *Load Calculation Applications Manual* Jeffrey D. Spitler, 2009 The *Load Calculation Applications Manual* builds upon three previous ASHRAE publications that focus on the calculation of cooling and heating loads for commercial buildings Whether you are a new engineer who is learning how to do load calculations or a veteran who wishes to learn the radiant time series RTS method this book is a must have resource Outlined in the manual are two methods for calculating cooling loads in nonresidential buildings the heat balance HB method and the RTS method Both methods were first fully presented for use in design load calculations in the predecessor to this volume *Cooling and Heating Load Calculation Principles* But much has changed since the book was first published in 1998 The *Load Calculation Applications Manual* steps in where the last book left off to provide you with the latest information regarding load calculations In the book's early chapters an overview of the heat transfer processes present in buildings and a brief discussion of how they are analyzed together in order to determine the cooling load are provided Later chapters focus on the theory and application of the RTS method systems and psychrometrics heating load calculations and the HB method and its implementation The accompanying CD contains Microsoft Excel spreadsheets that compute cooling loads using the RTS method These spreadsheets calculate the solar irradiation conduction time factor series and radiant time factors utilized by the method Plus you can adapt the spreadsheets to compute cooling loads for a wide range of buildings      ***Cooling and Heating Load Calculation Manual*, 1980      *Air Conditioning and Refrigeration Engineering*** Frank Kreith, Shan K. Wang, Paul Norton, 1999-12-06 An air conditioning system consists of components and equipment arranged in sequential order to control and maintain an indoor environment The goal is to provide a healthy and comfortable climate with acceptable air quality while being energy efficient and cost effective *Air Conditioning and Refrigeration Engineering* covers all types of systems from institutional and commercial to residential The book supplies the basics of design from selecting the optimum system and equipment to preparing the drawings and specifications It discusses the four phases of preparing a project gathering information developing alternatives evaluating alternatives and selling the best solution In addition the author breaks down the responsibilities of the engineer design documents computer aided design and government codes and standards *Air Conditioning and Refrigeration Engineering* provides you with an easy reference to all aspects of the topic This resource addresses the most current areas of interest such as computer aided design and drafting desiccant air conditioning and energy conservation It is a thorough and convenient guide to air conditioning and refrigeration engineering      ***Cooling and Heating Load Calculation Manual*, 1960      *Heating,***

**ventilating, air conditioning & dehumidifying systems**, 1987      *Guide to HVAC Systems*, 1980      *Handbook of Air Conditioning and Refrigeration* Shan K. Wang, 2000-11-07 A broad range of disciplines energy conservation and air quality issues construction and design and the manufacture of temperature sensitive products and materials is covered in this comprehensive handbook Provide essential up to date HVAC data codes standards and guidelines all conveniently located in one volume A definitive reference source on the design selection and operation of A C and refrigeration systems      *HVAC Principles and Applications Manual* Thomas E. Mull, 1998 Publisher's Note Products purchased from Third Party sellers are not guaranteed by the publisher for quality authenticity or access to any online entitlements included with the product The perfect on the job guide for beginning engineers HVAC Principles and Applications Manual offers professionals a clear introduction to HVAC that bypasses hard to understand theory and complex mathematics Based on methods approved by the American Society of Heating Refrigerating and Air Conditioning Engineers the book provides expert coverage of HVAC fundamentals as well as step by step design and application methods Filled with examples the manual is meant to simplify such tasks as calculating the heat loss rate of a building and choosing the right system controls This practical and concise manual is a must for HVAC designers and engineers engineers without HVAC experience technicians contractors and other engineering professionals      *HVAC Cooling Load - Calculations and Principles* A. Bhatia, 2014-10-16 Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems which can maintain the required conditions in the conditioned space To estimate the required cooling or heating capacities one has to have information regarding the design indoor and outdoor conditions specifications of the building specifications of the conditioned space such as the occupancy activity level various appliances and equipment used etc and any special requirements of the particular application For comfort applications the required indoor conditions are fixed by the criterion of thermal comfort while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products being stored Generally heating and cooling load calculations involve a systematic and stepwise procedure which account for all the building energy flows In practice a variety of methods ranging from simple rules of thumb to complex transfer function methods are used to arrive at the building loads This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD CLF method suggested by ASHRAE and includes two detailed examples For more advanced methods such as TFM the reader should refer to ASHRAE and other handbooks
