The consequences of these hacking actions were inevitably privacy violation, data corruption, or information leaking. Machine learning and data mining techniques have significant applications in the domains of privacy protection and cybersecurity, including intrusion detection, authentication, and website defacement detection, that can help to combat these breaches. *Applications of Machine Learning and Deep Learning for Privacy and Cybersecurity* provides machine and deep learning methods for analysis and characterization of events regarding privacy and anomaly detection, as well as for establishing predictive models for cyber attacks or privacy violations. It provides case studies of the use of these techniques and discusses the expected future developments on privacy and cybersecurity applications. Covering topics such as behavior-based authentication, machine learning attacks, and privacy preservation, this book is a crucial resource for IT specialists, computer engineers, industry professionals, privacy specialists, security professionals, consultants, researchers, academicians, and students and educators of higher education **Building Trust in the Generative Artificial Intelligence Era** Joanna
