Which process is responsible for the loss of matter from the system? a. Photosynthesis b. Respiration c. Decomposition d. Combustion	Matter Cycles Read the passage carefully before answering the questions that follow. Matter is constantly cycling through ecosystems, moving between living organisms and non-living components like soil, water, and air. This cycle is essential for life on Earth. The process of photosynthesis in plants and other producers captures energy from the sun and converts it into food. This energy is then passed on to consumers (animals) through feeding. Both producers and consumers release carbon dioxide into the atmosphere through respiration. Decomposition by microorganisms breaks down dead organic matter, returning nutrients to the soil. The water cycle is also a part of the matter cycle, as water is constantly moving between the ground, the atmosphere, and the surface of the Earth. Evaporation moves water from the ground and surface into the atmosphere, where it condenses into clouds. Precipitation falls as rain or snow, which then infiltrates the ground or runs off into bodies of water. The water cycle is essential for life on Earth, as it provides the water that all organisms need to survive. The matter cycle and the water cycle are closely linked, as they both involve the movement of matter and energy through ecosystems. Understanding these cycles is crucial for managing our resources and protecting the environment. Answer the questions that follow. 96. Which process is responsible for the loss of matter from the system? a. Photosynthesis b. Respiration c. Decomposition d. Combustion 97. Which process is responsible for the loss of matter from the system? a. Photosynthesis b. Respiration c. Decomposition d. Combustion 98.
