Digital & Print!

**CODOMINANCE - BLOOD TYPES**

In humans, three different alleles can create four different phenotypes. The alleles are A, B, and O, with the phenotypes being A, B, AB, and O. The alleles correspond to the carbohydrates found on the surface of a red blood cell. Since one blood type allele is inherited from each parent, there are several possible combinations that can be inherited.

Phenotype	Genotype
A	AA or AO
B	BB or BO
AB	AB
O	OO

**INCOMPLETE DOMINANCE**

In most inheritance genetics, one allele is more dominant than the other alleles. However, in incomplete dominance, both alleles are not completely dominant over another as each expresses dominance in incomplete dominance. In incomplete dominance, heterozygous phenotypes have traits from both parents that are not homozygous phenotypes. These related phenotypes are intermediate phenotypes, rather than one fully determining the phenotype.

Intermediate traits are a type of trait that exhibit incomplete dominance. The alleles for red (R) and white (r) flowers show incomplete dominance. Intermediate phenotypes (pink) flowers have pink flowers - an intermediate mix of red and white coloring. Complete the following Punnett squares and write the probabilities of the phenotypes as percentages.

1. Cross a pure flower with a white flower. What is the probability the following phenotypes?

Red	White	Pink
Red		
White		
Pink		

2. Cross two hawks with a white hawk. What is the probability the following phenotypes?

Red	White	Pink
Red		
White

3. Cross a peacock flower with a white flower. What is the probability the following phenotypes?

**CODOMINANCE - NON-MENDELIAN GENETICS**

In incomplete dominance, if the genotype is heterozygous, it expresses traits from both alleles (not fully expressed). Both alleles are expressed equally in incomplete dominance. Heterozygous individuals will express both traits at the same time.

1. In fowl, feathers of chickens, the allele for black feathers (B) is codominant with the allele for white feathers (b). Heterozygous chickens will have an intermediate phenotype that appears as speckled feathers (Bb). Answer the questions and Punnett squares. Express probabilities as percentages.

1. If black feathers and white feathers are crossed, what is the probability the following?

- White offspring
- Black offspring
- Intermediate offspring

2. Two speckled chickens are crossed. What is the probability the following?

- White offspring
- Black offspring
- Intermediate offspring

3. Two speckled chickens are crossed. What is the probability the following?
