

Characteristics of Waves: Part 1

Waves are patterns of motion that carry energy from one place to another. Some examples of waves include sound waves, water waves, and light waves. All waves have three characteristics: pitch, wavelength, frequency, and amplitude.

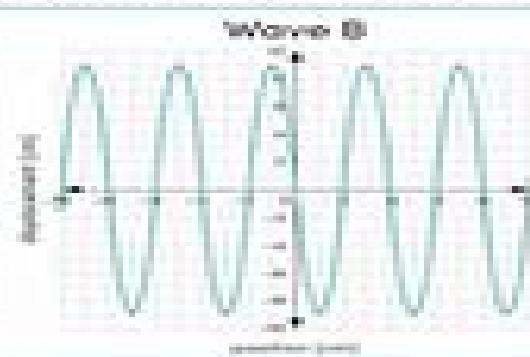

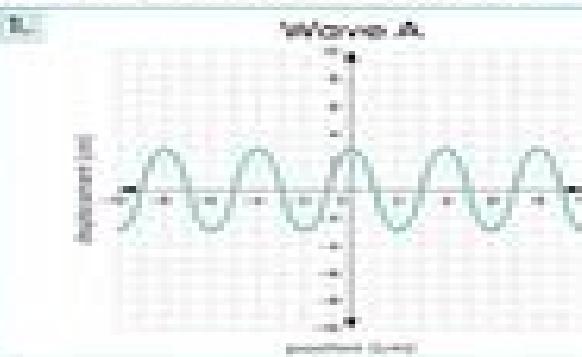

The **amplitude** of a wave is how far it dips below and rises above the resting position. In this example, the amplitude is 4 centimeters.

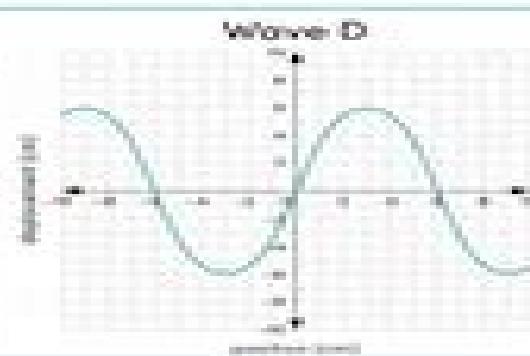

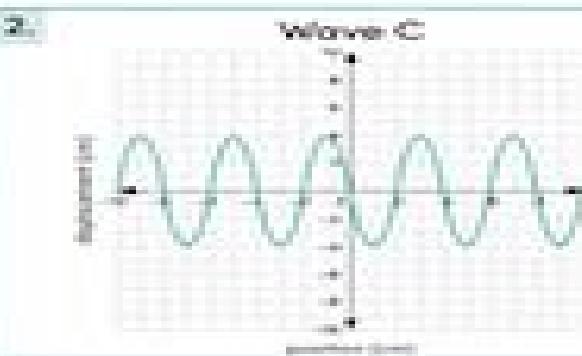

The **frequency** of a wave is the distance between two consecutive crests or two consecutive troughs. In this example, the wavelength is 10 centimeters.

The **frequency** of a wave is the number of wavelengths that pass a given point in a certain amount of time. If two waves have the same frequency, they reflect off the same surface at the same time.

Answer the questions below. You can assume that the waves in each set have the same frequency.

Which wave has the greater amplitude?

Which wave has the greater wavelength?
