It contains 36 articles covering most of the topics in the rapidly developing areas of meshfree methods and extended finite element methods (X-FEM). These topics include domain discretization, boundary discretization, combined domain boundary discretization, meshfree particle methods, collocation methods, X-FEM, etc. Papers on issues related to implementation and coding of meshfree methods are also presented. The areas of applications of meshfree methods include solving general partial differential equations, the mechanics of solids and structures, smart material structures, soil structures, fracture mechanics, fluid dynamics, impact, penetration, microfluidics, etc. In addition, techniques for field variable interpolation such as the moving least squares (MLS) approximation, the point interpolation method (PIM), and radial PIM are reported.      5th International Conference on Multibody Systems, Nonlinear Dynamics, and Control, 2005      Micromechanics of Composite Materials Jacob Aboudi, Steven M. Arnold, Brett A. Bednarczyk, 2013 Summary: A Generalized Multiscale Analysis Approach brings together comprehensive background information on the multiscale nature of the composite constituent material behaviour, damage models, and key techniques for multiscale modelling, as well as presenting the findings and methods developed over a lifetime's research of three leading experts in the field. The unified approach presented in the book for conducting multiscale analysis and design of conventional and smart composite materials is also applicable for structures with complete linear and nonlinear material behavior, with numerous applications provided to illustrate use. Modeling composite behaviour is a key challenge in research and industry when done efficiently and reliably; it can save money, decrease time to market with new innovations, and prevent component failure.      **A Collection of Technical Papers**, 1982      *Advances in Mathematical Modeling and Experimental Methods for Materials and Structures* Rivka Gilat, Leslie Banks-Sills, 2009-12-18 This collection of cutting edge papers, written by leading authors in honor of Professor Jacob Aboudi, covers a wide spectrum of topics in the field, presents both theoretical and experimental approaches, and suggests directions for possible future research.      **A Collection of Technical Materials**, 1982      *Structural Integrity Research of the Electric Power Research Institute* Stanley H. Fistedis, 2013-10-22 Structural Integrity Research of the Electric Power Research Institute presents the result of the mission of the Electric Power Research Institute to conduct research and development promoting the clean, safe, and economical generation of power by the utility industry. This book covers nuclear plant design, licensing, and regulation questions. Organized into 13 chapters, this book begins with an overview of the primary motivations for structural integrity research, including insights into reactor safety.

from probabilistic risk assessments and the increasing costs of plant structural components This text then examines the SIMQUAKE series of field tests on model containment structures Other chapters consider the methodology for realistically predicting fluid structure interaction transient loads and the structural response of the reactor vessel core support barrel and core This book discusses as well the ABAQUS finite element program The final chapter deals with high amplitude dynamic tests This book is a valuable resource for engineers
