Development of a Recommended Practice for Use of Controlled Low-strength Material in Highway Construction Kevin J. Folliard, National Cooperative Highway Research Program, 2008 Explores the use of controlled low strength material CLSM in highway construction applications in particular as backfill utility bedding and void fill and in bridge approaches. The report also examines a recommended practice for the use of CLSM that was developed through a series of full scale field experiments. This report presents the full text of the contractor's final report of the project and three of the five appendices which present the test methods Appendix B, specifications Appendix C and practice Appendix D recommended for implementation. The corrosion study Appendix A and implementation plan Appendix E are available online as NCHRP Web Only Document 116.

Braided Structures

and Composites Sohel Rana, Raul Fangueiro, 2015-08-05 Braiding is a very old textile manufacturing technology that traditionally has been used to produce items like ropes, shoe laces and cables. Recently, braiding has gained attention in the medical, aerospace, transportation and civil engineering communities among others due to its ability to produce structures that can fulfill the explicit demand.

Multiscale Materials Modeling Siegfried Schmauder, Immanuel Schäfer, 2016-08-22

This book presents current spatial and temporal multiscaling approaches of materials modeling. Recent results demonstrate the deduction of macroscopic properties at the device and component level by simulating structures and materials sequentially on atomic, micro and mesostructural scales. The book covers precipitation strengthening and fracture processes in metallic alloys, materials that exhibit ferroelectric and magnetoelectric properties, as well as biological, metal, ceramic and polymer composites. The progress which has been achieved documents the current state of art in multiscale materials modelling. **MMM** on the route to full multi scaling. Contents: Part I: Multi time scale and multi length scale simulations of precipitation and strengthening effects; Linking nanoscale and macroscale; Multiscale simulations on the coarsening of Cu-rich precipitates in Fe using kinetic Monte Carlo, Molecular Dynamics and Phase Field simulations; Multiscale modeling predictions of age hardening curves in Al-Cu alloys; Kinetic Monte Carlo modeling of shear coupled motion of grain boundaries; Product Properties of a two phase magneto electric composite; Part II: Multiscale simulations of plastic deformation and fracture; Niobium alumina bicrystal interface fracture; Atomistically informed crystal plasticity model for body centred cubic iron; FE2AT finite element informed atomistic simulations; Multiscale fatigue crack growth modeling for welded stiffened panels; Molecular dynamics study on low temperature brittleness in tungsten single crystals; Multi scale cellular automata and finite element based model for cold deformation and annealing of a ferritic pearlitic microstructure; Multiscale simulation of the mechanical behavior of nanoparticle modified polyamide composites; Part III: Multiscale simulations of biological and bio inspired materials; bio sensors and composites; Multiscale Modeling of Nano Biosensors; Finite strain compressive behaviour of CNT epoxy nanocomposites; Peptide-zinc oxide interaction.
