Abstract

This research paper analyzes the correlation that exists between sleep and high-school student performance in class. To answer this question, we compared academic performance against questionnaires that detailed the sleep schedules of 122 high school students. Our results showed that there was a positive correlation between poor academic performance and getting fewer than 8 hours of sleep a night. The results also revealed that poor sleep patterns can lead to concentration and behavior issues. The implications of this study could be used to promote high schoolers sleeping at least 8 hours a night.
