Algebraic Semantics of Imperative Programs Joseph Goguen, Grant Malcolm, 1996 Algebraic Semantics of Imperative Programs presents a self contained and novel executable introduction to formal reasoning about imperative programs The authors primary goal is to improve programming ability by improving intuition about what programs mean and how they run The semantics of imperative programs is specified in a formal implemented notation the language OBJ this makes the semantics highly rigorous yet simple and provides support for the mechanical verification of program properties OBJ was designed for algebraic semantics its declarations introduce symbols for sorts and functions its statements are equations and its computations are equational proofs Thus an OBJ program is an equational theory and every OBJ computation proves some theorem about such a theory This means that an OBJ program used for defining the semantics of a program already has a precise mathematical meaning Moreover standard techniques for mechanizing equational reasoning can be used for verifying axioms that describe the effect of imperative programs on abstract machines These axioms can then be used in mechanical proofs of properties of programs Intended for advanced undergraduates or beginning graduate students Algebraic Semantics of Imperative Programs contains many examples and exercises in program verification all of which can be done in OBJ

Proceedings of the St. Petersburg Mathematical Society N.N. Uraltseva (Mathematikerin, Russland), This collection presents new results in algebra functional analysis and mathematical physics In particular evolution and spectral problems related to small motions of viscoelastic fluid are considered Specific areas covered in the book include functional equations and functional operator equations from the point of view of the C algebraic approach the existence of an isomorphism

between certain ideals regarded as Galois modules spectral problems in singularly perturbed domains scattering theory the existence of bounded solutions to the equation $\operatorname{div} u = f$ in a plane domain and a compactification of a locally compact group Also given is an historic overview of the mathematical seminars held at St Petersburg State University The results ideas and methods given in the book will be of interest to a broad range of specialists Report on the Effectiveness of Remedial Programs in New Jersey Public Colleges and Universities ,1984 *Mathematical Reviews* ,1979-12
