Jaffe, 1995-06-19 CAR is a symposium and exhibition covering the impact of computer and communication systems applied to radiology image guided therapy and other medical disciplines which use digital imaging for diagnosis and therapy planning CAR 95 also provides tutorials but more emphasis is given to a broad variety of specific problems related to medical technical issues in digital imaging This is achieved through in depth presentations of results of current medical imaging projects on a worldwide basis

Radiology ,1933 **Hyperspectral Imaging Technology in Food and Agriculture** Bosoon Park, Renfu Lu, 2015-09-29 Hyperspectral imaging or imaging spectroscopy is a novel technology for acquiring and analysing an image of a real scene by computers and other devices in order to obtain quantitative information for quality evaluation and process control Image processing and analysis is the core technique in computer vision With the continuous development in hardware and software for image processing and analysis the application of hyperspectral imaging has been extended to the safety and quality evaluation of meat and produce Especially in recent years hyperspectral imaging has attracted much research and development attention as a result rapid scientific and technological advances have increasingly taken place in food and agriculture especially on safety and quality inspection classification and evaluation of a wide range of food products illustrating the great advantages of using the technology for objective rapid non destructive and automated safety inspection as well as quality control Therefore as the first reference book in the area Hyperspectral Imaging Technology in Food and Agriculture focuses on these recent advances The book is divided into three parts which begins with an outline of the fundamentals of the technology followed by full covering of the application in the most

researched areas of meats fruits vegetables grains and other foods which mostly covers food safety and quality as well as remote sensing applicable for crop production Hyperspectral Imaging Technology in Food and Agriculture is written by international peers who have both academic and professional credentials with each chapter addressing in detail one aspect of the relevant technology thus highlighting the truly international nature of the work Therefore the book should provide the engineer and technologist working in research development and operations in the food and agricultural industry with critical comprehensive and readily accessible information on the art and science of hyperspectral imaging technology It should also serve as an essential reference source to undergraduate and postgraduate students and researchers in universities and research institutions

Kaplitt, Matthew During, 2006 Few areas of biomedical research provide greater opportunities to capitalize upon the revolution in genomics and molecular biology than gene therapy This is particularly true for the brain and nervous system

where gene transfer has become a key technology for basic research and has recently been translated to human therapy in several landmark clinical trials *Gene Therapy in the Brain From Bench to Bedside* represents the definitive volume on this subject Edited by two pioneers of neurological gene therapy this volume contains contributions by leaders who helped to create the field as well as those who are expanding the promise of gene therapy for the future of basic and clinical neuroscience Drawing upon this extensive collective experience this book provides clear and informative reviews on a variety of subjects which would be of interest to anyone who is currently using or contemplating exploring gene therapy for neurobiological applications Basic gene transfer technologies are discussed with particular emphases upon novel vehicles immunological issues and the role of gene therapy in stem cells Numerous research applications are reviewed particularly in complex fields such as behavioral neurobiology Several preclinical areas are also covered which are likely to translate into clinical studies in the near future including epilepsy pain and amyotrophic lateral sclerosis Among the most exciting advances in recent years has been the use of neurological gene therapy in human clinical trials including Parkinson s disease Canavan disease and Batten disease Finally readers will find insider information on technological and regulatory issues which can often limit effective translation of even the most promising idea into clinical use This work provides up to date information and key insights into those gene therapy issues which are important to both scientists and clinicians focusing upon the brain and central nervous system Medical Image Computing and Computer-assisted Intervention ,1998
