Basor, I. Gohberg, 2012-12-06 This volume is dedicated to Harold Widom a distinguished mathematician and renowned expert in the area of Toeplitz Wiener Hopf and pseudodifferential operators on the occasion of his sixtieth birthday The book opens with biographical material and a list of the mathematician's publications this being followed by two papers based on Toeplitz lectures which he delivered at Tel Aviv University in March 1993 The rest of the book consists of a selection of papers containing some recent achievements in the following areas Szeg Widom asymptotic formulas for determinants of finite sections of Toeplitz matrices and their generalizations the Fisher Hartwig conjecture random matrices analysis of kernels of Toeplitz matrices projectional methods and eigenvalue distribution for Toeplitz matrices the Fredholm theory for convolution type operators the Nehari interpolation problem with generalizations and applications and Toeplitz Hausdorff type theorems The book will appeal to a wide audience of pure and applied mathematicians **Monotone Nonautonomous Dynamical Systems** David N. Cheban, 2024-07-15 The monograph presents ideas and methods developed by the author to solve the problem of existence of Bohr Levitan almost periodic respectively almost recurrent in the sense of Bebutov almost automorphic Poisson stable solutions and global attractors of monotone nonautonomous differential difference equations Namely the text provides answers to the following problems 1 Problem of existence of at least one Bohr Levitan almost periodic solution for cooperative almost periodic differential difference equations 2 Problem of existence of at least one Bohr Levitan almost periodic solution for uniformly stable and dissipative monotone differential equations I U Bronshtein's conjecture 1975 3 Problem of description of the structure of the global attractor for monotone nonautonomous dynamical systems 4 The structure of the invariant minimal sets and global attractors for one dimensional monotone nonautonomous dynamical systems 5 Asymptotic behavior of monotone nonautonomous dynamical systems with a first integral Poisson stable motions convergence asymptotically Poisson stable motions and structure of the Levinson center compact global attractor of dissipative systems 6 Existence and convergence to Poisson stable motions of monotone sub linear nonautonomous dynamical systems This book will be interesting to the mathematical community working in the field of nonautonomous dynamical systems and their applications population dynamics oscillation theory ecology epidemiology economics biochemistry etc The book should be accessible to graduate and PhD students who took courses in real analysis including the elements of functional analysis general topology and with general background in dynamical systems and qualitative theory of differential difference equations Babel, 1988

the great mathematicians of our time who inspired innumerable fellow mathematicians and directed many students The volume reflects the wide spectrum of Gohberg's mathematical interests It consists of more than 25 invited and peer reviewed original research papers written by his former students co authors and friends Included are contributions to single and multivariable operator theory commutative and non commutative Banach algebra theory the theory of matrix polynomials and analytic vector valued functions several variable complex function theory and the theory of structured matrices and operators Also treated are canonical differential systems interpolation completion and extension problems numerical linear algebra and mathematical systems theory

*Crossed Lines* Ashlee Mack, 2025-08-29 They were brilliant Beautiful Bound too closely When Dr Mira Hall agrees to mentor the Caulfield twins two unnervingly gifted students with a magnetic and almost dangerous connection she convinces herself it's purely academic But what begins as a meeting of minds soon becomes something far more intoxicating Drawn into their world of sharp intellect and forbidden intimacy Mira finds herself caught in a web where every glance carries weight every conversation hums with unspoken tension and every line between teacher and student begins to blur Desire becomes obsession Boundaries crumble And in the space where ethics and temptation collide nothing will remain untouched Brother sister Girl on girl Threesome Teacher student

**Many-Body Schrödinger Equation** Hiroshi Isozaki, 2023-08-28 Spectral properties for Schrödinger operators are a major concern in quantum mechanics both in physics and in mathematics For the few particle systems we now have sufficient knowledge for two body systems although much less is known about N body systems The asymptotic completeness of time dependent wave operators was proved in the 1980s and was a landmark in the study of the N body problem However many problems are left open for the stationary N particle equation Due to the recent rapid development of computer power it is now possible to compute the three body scattering problem numerically in which the stationary formulation of scattering is used This means that the stationary theory for N body Schrödinger operators remains an important problem of quantum mechanics It is stressed here that for the three body problem we have a satisfactory stationary theory This book is devoted to the mathematical aspects of the N body problem from both the time dependent and stationary viewpoints The main themes are 1 The Mourre theory for the resolvent of self adjoint operators 2 Two body Schrödinger operators Time dependent approach and stationary approach 3 Time dependent approach to N body Schrödinger operators 4 Eigenfunction expansion theory for three body Schrödinger operators Compared with existing books for the many body problem the salient feature of this book consists in the stationary scattering theory 4 The eigenfunction expansion theorem is the physical basis of Schrödinger operators Recently it proved to be the basis of inverse problems of quantum scattering This book provides necessary background information to understand the physical and mathematical basis of Schrödinger operators and standard knowledge for future development
