

that the moon's orbital path is nearly parallel to the horizon. Because of its low inclination on successive nights it will be at its minimum delay of time of rising, that is, the moon will rise nearly the same time each night for this time of year. This phenomenon can offer additional illumination past the time of sunset, and therefore, allow for added time of light during the traditional northern hemisphere fall harvest. The following month's full moon is called the Hunter's moon for the same reason except that it allows for additional time for the fall hunt which was so essential in the days of our forefathers.
