The Professional Development of Teachers: Practice and Theory Philip Adey,2004-03-31 Hopkins Bruce Joyce Michael Huberman Matthew Miles and Virginia Richardson But we have chosen to present our own experience and empirical data first and then in Part 3 to show how this experience and data relates to models which have been proposed by others We will address here methodological issues concerned with collecting and interpreting evidence of relationships amongst the many individual and situational factors associated with PD and re visit the arguments about process product research on PD In the light of our experience we will interrogate models of PD which have been proposed by others and attempt to move forward our total understanding of the process of the professional development of teachers for educational change In conclusion we will look at some current national practice in professional development concentrating on the recent English experience of introducing strategies into schools but referring also by way of contrast to the situation in the United States **WHAT S THE PROBLEM** Why has the professional development of teachers already exercised so many good minds for so long And how can we justify adding another book to this field The answer to both questions must lie in the continuing demand from society in general at least as interpreted by politicians and newspaper editors for improvements in the quality of education

In 2008 79 per cent of pupils met the Government's expected standard at Key Stage 2 age 11. This means that over one in five children are starting secondary school without a secure foundation in mathematics. There are persistent gaps in the mathematics performance of primary school pupils from different backgrounds and with different characteristics. In contrast to other subjects boys are making more progress than girls. The biggest attainment gap 18 percentage points is related to deprivation. Performance varies across England and between local authorities with the percentage of pupils achieving the expected standard at KS2 ranging from 70 to 87 per cent. The Primary National Strategy has contributed to improvements in primary mathematics teaching and learning but weaknesses persist in vital areas such as the use and application of mathematics to real life situations and the assessment of pupils' progress. The lack of depth in subject knowledge of many primary school teachers and the lack of take up of continuing professional development in mathematics are major concerns which the Department has only recently begun to address through a ten year programme to train 13 000 specialist teachers.

National Curriculum Assessment Richard A. Daugherty, 1995 Daugherty education U of Wales Aberystwyth chronicles the evolution of National Curriculum Assessment in England and Wales from the Task Group on Assessment and Testing through the early experience of implementation. He explains aspects of the policy such as Standard Assessment Tests, teacher assessment, league tables and key stage 4 and comments on public and professional reactions to government policy decisions concluding that the Dearing Review is too deeply flawed to be a secure base for the future. It gives guidance on using physical resources to demonstrate key concepts, extended examples on how to teach different curriculum topics and how to plan for small step progression. It argues that effective mastery teaching requires careful and knowledgeable support for primary teachers who may not yet be maths specialists. New to this second edition. New chapter on variation theory and practice. Updated case studies exploring how mastery teaching has evolved. Updated review of current mastery resources available to UK teachers. Robert Newell is a lecturer at the UCL Institute of Education London.

The Math Master Level 1. Preschool-Age 6 Barbara W. Levy, 1984 This booklet designed for preschool through age 6 is the first in a series designed to help teachers develop a more positive and creative approach to giving work on mathematics skills to children. It is based on objectives concerning creativity, fostering independent thinking, using experiences using mastery reinforcing previously learned skills, emphasizing choices and following directions, encouraging divergent thinking and developing concepts. Each of the 40 pages may be reproduced by the teacher for student use. An answer key is included.
