*Plant Glycobiology - a sweet world of lectins, glycoproteins, glycolipids and glycans* Els J. M. Van Damme, Nausicaä Lannoo, Cécile Albenne, Elisabeth Jamet, 2015-02-12 Plants synthesize a wide variety of unique glycan structures which play essential roles during the life cycle of the plant. Being omnipresent throughout the plant kingdom ranging from simple green algae to modern flowering plants glycans contribute to many diverse processes. Glycans can function as structural components in the plant cell wall, assist in the folding of nascent proteins, act as signaling molecules in plant defense responses or ER stress pathways, or serve within the energy metabolism of a plant. In most cases glycans are attached to other macromolecules to form so called glycoconjugates e.g. glycoproteins, proteoglycans and glycolipids, but they can also be present as free entities residing in the plant cell. Next to the broad complex set of glycans, plants also evolved an elaborate collection of lectins or proteins with a lectin-like domain which can recognize and bind to endogenous plants' own or exogenous foreign glycans. Though still poorly understood in plants, the dynamic interactions between lectins and carbohydrate structures are suggested to be involved in gene transcription, protein folding, protein transport, cell adhesion, signaling as well as defense responses. As such a complex and largely undetermined glycan interactome is established inside plant cells between cells and their surrounding matrix inside the extracellular matrix and even between organisms. Studying the biological roles of plant glycans will enable to better understand plant development and physiology in order to fully exploit plants for food, feed and production of pharmaceutical proteins. In this Research Topic we want to provide a platform for articles describing the latest research perspectives and methodologies related to the fascinating world of plant glycobiology with a focus on following subjects: 1. Identification and characterization of plant glycans, their biosynthetic and degradation enzymes; 2. Characterization of plant lectins and glycoproteins; 3. Plant glycans in the plant's energy metabolism; 4. Role of plant glycans in plant defense signaling; 5. Use of plant lectins in pest control; 6. Plant lectins as new tools in human medicine; 7. Glyco engineering in plants.

**Psychological perspectives on expertise** Guillermo Campitelli, Michael H. Connors, Merim Bilalić, David Zachary Hambrick, 2015-05-19 Experts are persons who are very knowledgeable about or skillful in a particular area. The aim of this Research Topic is to advance knowledge in the understanding of the phenomenon of expertise by putting together different lines of research that directly or indirectly study expertise. Herbert Simon's expertise studies initiated two lines of research. One is interested in elucidating the cognitive processes underlying expertise and the other investigates how expertise develops. These lines of research started with studies comparing experts and novices in chess and then they extended to numerous areas of expertise such as music, medical diagnosis, sports, arts and sciences. In

the field of judgment and decision making researchers investigate the quality of judgments and decisions of experts in different professions e g clinical psychologists medical practitioners judges meteorologists stock brokers Those lines of research explicitly investigate the topic of expertise but there are other research areas that make a substantial contribution to understanding expertise Scholars in language acquisition and in face perception for example investigate cognitive processes and development of expertise in areas in which almost everyone becomes an expert Furthermore skill acquisition research informs in detail about short term cognitive changes that may be important to understand how expertise develops We are interested in original research that advances knowledge in the understanding of decision making cognitive processes and development of expertise in sports intellectual games arts scientific disciplines and professions as well as expertise in cognitive abilities such as perception memory attention language and imagery We are also interested in theoretical articles in any of these areas articles that describe computational or mathematical models of expertise and articles offering a framework that would guide expertise research Articles that offer integrative approaches of some of the areas described above are strongly encouraged The goal of this Research Topic is to produce a hallmark piece of work in the field of expertise which complements and does not overlap with the Neural implementations of expertise Research Topic in Frontiers in
