## 2014 Physics Paper 1 September:

**Cities in Transition** Thomas Sauer, Susanne Elsen, Cristina Garzillo, 2016-02-26 Cities in Transition focuses on the sustainability transitions initiated in 40 European cities. The book presents the incredible wealth of insights gathered through hundreds of interviews and questionnaires. Four key domains: local energy systems, local green spaces, local water systems, and local labour markets, have been the focus of the field research investigating local potentials for social innovation and new forms of civil society self-organisation. Examining the potential of new organizational frameworks like co-operatives, multi-stakeholder constructions, local regional partnerships, and networks for the success of such transitions, this book presents the key ingredients of a sustainable urban community as a viable concept to address current global financial, environmental, and social challenges. Crucial reading for academics and practitioners of urban planning and sustainability in Europe. Cities in Transition is an innovative roadmap for sustainability in changing cities. [China in Space](#) Brian Harvey, 2019-10-08 In 2019, China astonished the world by landing a spacecraft and rover on the far side of the Moon, something never achieved by any country before. China had already become the world's leading spacefaring nation by rockets launched sending more into orbit than any other. China is now a great space superpower alongside the United States and Russia, sending men and women into orbit, building a space laboratory, Tiangong, and sending probes to the Moon and asteroids. Roadmap 2050 promises that China will set up bases on the Moon and Mars and lead the world in science and technology by mid-century. China's space programme is one of the least well-known, but this book will bring the reader up to date with its mysteries, achievements, and exciting plans. China has built a fleet of new powerful Long March rockets, four launch bases, tracking stations at home and abroad, with gleaming new design and production facilities. China is poised to build a large permanent space station, bring back lunar rocks, assemble constellations of communications satellites, and send spaceships to Mars, the moons of Jupiter, and beyond. A self-sustaining lunar base, Yuegong, has already been simulated. In space, China is the country to watch.
