### Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges

Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets. These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response a series of international discussions on the nature of dual use life science arose. These discussions addressed the complex social, technical, political, security and ethical issues related to dual use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives.

*Ethical Issues and Citizen Rights in the Era of Digital Government Surveillance* Cropf, Robert A., Bagwell, Timothy C., 2016-02-02 Questions surrounding the concept of freedom versus security have intensified in recent years due to the rise of new technologies. The increased governmental use of technology for data collection now poses a threat to citizens privacy and is drawing new ethical concerns. Ethical Issues and Citizen Rights in the Era of Digital Government Surveillance focuses on the risks presented by the usage of surveillance technology in the virtual public sphere and how such practices have called for a re-examination of what limits should be imposed. Highlighting international perspectives and theoretical frameworks relating to privacy concerns this book is a pivotal reference source for researchers, professionals and upper level students within the e-governance realm.

**Future Spacecraft Propulsion Systems and Integration** Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems. It discusses how to match near term and far term aerospace vehicles to missions and provides a comprehensive overview of the subject directly contributing to the next generation space infrastructure from space tourism to space exploration. This holistic treatment defines a mission portfolio addressing near term to long term space transportation needs covering sub orbital, orbital and escape flight profiles. In this context a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access. A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission. This technique balances

required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike *Good Design Practices for GMP Pharmaceutical Facilities* Terry Jacobs, Andrew A. Signore, 2016-08-19 This revised publication serves as a handy and current reference for professionals engaged in planning, designing, building, validating, and maintaining modern cGMP pharmaceutical manufacturing facilities in the U.S. and internationally. The new edition expands on facility planning with a focus on the ever-growing need to modify existing legacy facilities and on current trends in pharmaceutical manufacturing which include strategies for sustainability and LEED building ratings. All chapters have been re-examined with a fresh outlook on current good design practices *European Yearbook / Annuaire Européen, Volume 62 (2014)* Council of Europe, 2015-12-14 The European Yearbook promotes the scientific study of nineteen European supranational organisations and the OECD. Examples from Exploration* Bernhard Seubert, 2021-11-26 Scientific Essay from the year 2014 in the subject Psychology Industrial and organizational psychology grade A language English abstract Good decision making creates value for a company. The decision to drill in the right place or not has strong economic repercussions. Moreover, the human approach to decision making can be flawed. Many of the common flaws in decision making are related to heuristic factors that are by human ways of thinking and drawing conclusions. These factors can negatively impact the outcomes of an exploration program. This paper gives examples of cases in which geoscientific reasoning can lead to pitfalls and explores why this is so. The paper then discusses the merits of the multiple working hypotheses (MWH) concept as an aid to harnessing seemingly contradictory data relating to several often mutually exclusive interpretations or scenarios. A simple method using a spreadsheet and decision tree analysis is proposed to quantify the outcomes of multiple scenarios. The method is illustrated by a subsurface example in which two possible interpretations (reef versus volcano) are considered. An outlook of Bayesian statistics and other methods is included *PNHS Newsletter*, 2013-10
