**Food Printing: 3D Printing in Food Industry** Kamalpreet Sandhu, Sunpreet Singh, 2022-03-14 This book provides a comprehensive overview of the technical notes research designs literature and 3DP three dimensional printing technology applications for effective food printing. It provides a multidisciplinary coverage of 3D food printing in different food sectors. Recent advancements in manufacturing processes have led food industries to create innovations to stay competitive in the market. 3D food printing incorporates 3DP digital gastronomy strategies to manufacture food products with consistency in shape, color, flavor, texture, and even nutrition. Thus, by controlling the number of materials and the quality of nutrients, food items can be manufactured and handled to fulfill their particular requirements. For food printing, both proprietary structures and self-developed frameworks are used from open sources. Similar frameworks are re-engineered to reformulate administration, content creation, and user interface. For example, three printing medium types: natural printable products, non-printable synthetic food products, and alternative ingredients, as well as two recipe forms: i.e., element-based recipes and regular recipes are used for customized food production. The authors address that open 3D technology for food printing and food processing technology are theoretically correlated with food printing. The book will help industrial designers, nutrition professionals, dieticians, manufacturing enterprises, and young researchers in food technology, material science, and mechanical engineering understand the latest advances in 3DP technology in food industries.

*Design, Innovation and Intellectual Property* Nan Jiang, 2026-01-01 This book conducts a comprehensive exploration of the intersection and integration of design and intellectual property in diverse fields. To begin with, it presents the concept, principles, types, and tools of design along with the innovative integration within design. Subsequently, it discusses the relationship between design and innovation, emphasizing the connections and distinctions between them and highlighting the significance of intellectual property protection for both. The ensuing chapters delve profoundly into specific domains such as product design, environmental design, visual communication design, and service design, analyzing the characteristics, types, and the legal framework of intellectual property protection within each. The final chapter centers on the impact of emerging technologies on design innovation and the challenges they pose to the intellectual property system and proposes strategies for establishing a new type of intellectual property system to tackle these challenges. It aims to offer systematic and novel thinking to a broad spectrum of groups such as teachers, undergraduate students, postgraduate students, who have an interest in intellectual property protection in the field of design innovation, as well as international students and foreign readers who are intrigued by the field of intellectual property protection in the Chinese design and creative sector.
