Tarquin, 1989 This student friendly text on the current economic issues particular to engineering covers the topics needed to analyze engineering alternatives. Students use both hand worked and spreadsheet solutions of examples, problems and case studies. In this edition the options have been increased with an expanded spreadsheet analysis component twice the number of case studies and virtually all new end of chapter problems. The chapters on factor derivation and usage, cost estimation, replacement studies and after tax evaluation have been heavily revised. New material is included on public sector projects and cost estimation. A reordering of chapters puts the fundamental topics up front in the text. Many chapters include a special set of problems that prepare the students for the Fundamentals of Engineering FE exam. This college level text provides students and practicing professionals with a solid preparation in the financial understanding of engineering problems and projects as well as the techniques needed for evaluating and making sound economic decisions. Distinguishing characteristics include learning objectives for each chapter, an easy to read writing style, many solved examples, integrated spreadsheets and case studies throughout the text. Graphical cross referencing between topics and quick solve spreadsheet solutions are indicated in the margins throughout the text. While the chapters are progressive, over three quarters can stand alone, allowing instructors flexibility for meeting course needs. A complete online learning center OLC offers supplemental practice problems, spreadsheet exercises and review questions for the Fundamentals of Engineering FE exam.    *Popular Photography*, 1999-08
