**The Adenosinergic System** Micaela Morelli, Nicola Simola, Jadwiga Wardas, 2015-10-01 Adenosine A2A receptor antagonists have shown great promise in the treatment of Parkinson's Disease and alleviation of symptoms. This book addresses various aspects of this class of drugs from their chemical development to their clinical use. Among the many insightful chapters contained in this book, there are three unique reviews that have not previously been published in any format: 1 a history of istradefylline, the first A2A antagonist approved for treatment of Parkinson's Disease; 2 an overview of neuroimaging studies in human death and disease; and 3 a study of urate as a possible biomarker and neuroprotectant.

Eugene George Key, 1960      *Demodulation of Frequency Or Space Modulated Light* Stanford University. Stanford Electronics Laboratories, 1965 The generation and detection of a light beam which is deflected back and forth at a microwave rate in accordance with frequency modulation on the beam is considered. Deflection was achieved by sending the frequency modulated light through a dispersing element. The detection system consisted of a photocathode which emitted a transversely modulated electron beam into a transverse field interaction circuit. General analyses were developed for the dispersion and electron beam circuit interaction systems. The applicability of the instantaneous frequency viewpoint was explored in detail and a new condition for the validity of this viewpoint was derived. Phototube design procedures were formulated. Experiments demonstrated the dispersion and interaction mechanisms including an unforeseen effect involving partial interception of the deflected light beam. The experiments supported the detailed theoretical analyses. An examination of the basic noise limitation revealed a significant advantage over certain other FM light detection systems. As optical modulation techniques improve, it is expected that this approach may represent a superior means of detection in optical communications systems.
