spend over two thirds of their time researching literature for information on valve sizing availability materials and standards  
This is nonproductive time Unfortunately most companies do not have the luxury of a team of experts with the necessary  
experience and education in all of the different fields that apply to valves The next best alternative is to understand what  
valves are and all the things they can do By definition valves are devices that stop start mix or change the direction and or  
magnitude of the fluid flow pressure or its tempera ture As a specifier or selector you will have to determine whether the  
valve is going to be used for flow control throttling or for on off service Then you will have to determine the cycle life or  
frequency of their operation You will discover that valves are classified into three categories on off valves control or regulator  
valves and fixed valves such as orifice plate nozzle duckbill rupture disk blind valve etc These valves represent approximately  
thirty different design configurations It has been said that if cost and delivery were no problem anyone of the seven basic  
valve styles could do the job of any other one But cost and delivery are very important factors in the real world So you have  
to be able to distinguish among these seven styles ball butterfly gate globe pinch diaphragm plug and poppet valves
