## **A380 Maintenance Manual Guide:**

**Condition-Based Maintenance in Aviation** Ravi Rajamani, 2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how different components degrade during operations it is possible to schedule inspections repairs and overhauls at appropriate intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety

*Evaluation of Long-term Field Performance of Cold In-place Recycled Roads* Don Chen, Charles Jahren, 2007 Cold in place recycling CIR has become an attractive method for rehabilitating asphalt roads that have good subgrade support and are suffering distress related to non structural aging and cracking of the pavement layer Although CIR is widely used its use could be expanded if its performance were more predictable Transportation officials have observed roads that were recycled under similar circumstances perform very differently for no clear reason Moreover a rational mix design has not yet been developed design assumptions regarding the structural support of the CIR layer remain empirical and conservative and there is no clear understanding of the cause effect relationships between the choices made during the design construction process and the resulting performance The objective of this project is to investigate these relationships especially concerning the age of the recycled pavement cumulative traffic volume support conditions aged engineering properties of the CIR materials and road performance Twenty four CIR asphalt roads constructed in Iowa from 1986 to 2004 were studied 18 were selected from a sample of roads studied in a previous research project HR 392 and 6 were selected from newer CIR projects constructed after 1999 This report describes the results of comprehensive field and laboratory testing for these CIR asphalt roads The results indicate that the modulus of the CIR layer and the air voids of the CIR asphalt binder were the most important factors affecting CIR pavement performance for high traffic roads For low traffic roads the wet indirect tensile strength significantly affected pavement performance The results of this research can help identify changes that should be made with regard to design material selection and construction in order to improve the performance and cost effectiveness of future recycled roads

intelligence will fundamentally change our working world We can already see what technology is capable of but that is nothing compared to what we can expect in the future Should we be afraid of these changes or should we welcome them Are we at the mercy of an unstoppable force No because after all we are the ones who have brought about this development This book will help you evaluate your fears by putting the upcoming changes on a solid base It shows where we have come from in order to understand where we are going to or in other words where we should go in order to shape the future at our will Using scenarios Klaus Kornwachs examines the fields of work in which major AI related changes can be expected and shows that major disruptions have already taken place in the past You will find out what today s developments mean and how to classify them without rushing to proclaim a new age The book offers an outlook on possible future work environments Work will probably consist of more creative less routine based activities The current employer employee relationship will change from working to rule to defining and completing tasks independently This is not a prediction but a spectrum of possibilities that could result from the technological developments There is always more than one option To find out what we want it is worth looking at the meaning of work as part of human existence There are many different views on this all of which are presented in the book After reading this book some of the current discussions about the impact of AI on the working world will appear exaggerated to you You will gain a better understanding of the limits of AI as well as our own limits You will also be able to decide where AI can overcome those limits and where we need to set limits for ourselves
