safe and aesthetic roadside treatments in urban areas The report also examines a toolbox of roadside treatments designed to balance pedestrian bicyclist and motorist safety and mobility Roadside Design Guide American Association of State

Highway and Transportation Officials. Task Force for Roadside Safety,2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S

Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350

Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition

This synthesis will be of interest to highway administrators safety officials design engineers traffic engineers and analysts who are concerned with improving highway safety Severity indices which serve as indicators of the expected injury

consequences of a crash are an integral part of the analysis of proposed roadside safety improvements Severity indices that have been developed by many states and research agencies are described as are the issues associated with developing the values and applying and evaluating the indices The history of severity indices the issues associated with estimating accident severity and associated costs and the range of indices that have been developed are described This publication of the Transportation Research Board also discusses the relationship of accident severity indices with the American Association of State Highway and Transportation Officials AASHTO Roadside Design Guide and the Federal Highway Administration FHWA ROADSIDE computer program While research since the 1960s has sought to quantify severity indices for a range of object types and impact conditions there remains a wide variation in the values from which analysts may choose when performing cost effectiveness evaluations
