Anderson, 2018-09-14 Engineering Standards for Forensic Application presents the technologies and law precedents for the application of engineering standards to forensic opinions discussing Fundamentals Disciplines Engineering Standards The Basics and the Future of Forensics The book explores the engineering standard and how it is used by experts to give opinions that are introduced into evidence and how they are assumed to be the best evidence known on the topic at hand Final sections include coverage of NFL Brain Injuries and the Flint Water Crisis Examples of the use of engineering standards are shown and discussed throughout the work Addresses a wide variety of forensic engineering areas including relevant law Provides a new approach of study that includes the work of both engineers and litigators Contains contributions from over 40 experts offering the reader examples of general forensic methods that are based on reliable engineering practice      **Access Control Design on Highway Interchanges**, 2008 The adequate spacing and design of access to crossroads in the vicinity of freeway ramps are critical to the safety and traffic operations of both the freeway and the crossroad The research presented in this report develops a methodology to evaluate the safety impact of different access road spacing standards The results clearly demonstrate the shortcomings of the AASHTO standards and the benefits of enhancing them The models developed as part of this research were used to compute the crash rate associated with alternative section spacing The study demonstrates that the models satisfied the statistical requirements and provide reasonable crash estimates The results demonstrate an eight fold decrease in the crash rate when the access road spacing increases from 0 to 300 m An increase in the minimum spacing from 90 m 300 ft to 180 m 600 ft results in a 50 percent reduction in the crash rate The models were used to develop lookup tables that quantify the impact of access road spacing on the expected number of crashes per unit distance The tables demonstrate a decrease in the crash rate as the access road spacing increases An attempt was made to quantify the safety cost of alternative access road spacing using a weighted average crash cost The weighted average crash cost was computed considering that 0 6 34 8 and 64 6 percent of the crashes were fatal injury and property damage crashes respectively These proportions were generated from the field observed data The cost of each of these crashes was provided by VDOT as 3 760 000 48 200 and 6 500 for fatal injury and property damage crashes respectively This provided an average weighted crash cost of 43 533 This average cost was multiplied by the number of crashes per mile to compute the cost associated with different access spacing scenarios These costs can assist policy makers in quantifying the trade offs of different access management regulations      **Field Testing of Railroad Flatcar Bridges: Multiple spans**, 2007 Based on the conclusions of IHRB Project TR 444 Demonstration Project Using Railroad Flat Car Bridges for Low Volume Road Bridges additional research on the use of RRFC bridges was undertaken This portion of the project investigated the following Different design and rating procedures Additional single span configurations plus multiple span configurations Different mechanisms for connecting adjacent RRFCs
