*Deep In-memory Architectures for Machine Learning* Mingu Kang, Sujan Gonugondla, Naresh R. Shanbhag, 2020-01-30  
This book describes the recent innovation of deep in memory architectures for realizing AI systems that operate at the edge of energy latency accuracy trade offs From first principles to lab prototypes this book provides a comprehensive view of this emerging topic for both the practicing engineer in industry and the researcher in academia The book is a journey into the exciting world of AI systems in hardware

*Functional Verification of Programmable Embedded Architectures* Prabhat Mishra, Nikil D. Dutt, 2005-07  
Validation of programmable architectures consisting of processor cores coprocessors and memory subsystems is one of the major bottlenecks in current System on Chip design methodology A critical challenge in validation of such systems is the lack of a golden reference model As a result many existing validation techniques employ a bottom up approach to design verification where the functionality of an existing architecture is in essence reverse engineered from its implementation Traditional validation techniques employ different reference models depending on the abstraction level and verification task resulting in potential inconsistencies between multiple reference models This book presents a top down validation methodology that complements the existing bottom up approaches It leverages the system architect s knowledge about the behavior of the design through architecture specification using an Architecture Description Language ADL The authors also address two fundamental challenges in functional verification lack of a golden reference model and lack of a comprehensive functional coverage metric

*Functional Verification of Programmable Embedded Architectures A Top Down Approach* is designed for students researchers CAD tool developers designers and managers interested in the development of tools techniques and methodologies for system level design microprocessor validation design space exploration and functional verification of embedded systems

*Domain-Specific Computer Architectures for Emerging Applications* Chao Wang, 2024-06-04  
With the end of Moore s Law domain specific architecture DSA has become a crucial mode of implementing future computing architectures This book discusses the system level design methodology of DSAs and their applications providing a unified design process that guarantees functionality performance energy efficiency and real time responsiveness for the target application DSAs often start from domain specific algorithms or applications analyzing the characteristics of algorithmic applications such as computation memory access and communication and proposing the heterogeneous accelerator architecture suitable for that particular application This book places particular focus on accelerator hardware platforms and distributed systems for various novel applications such as machine learning data mining neural networks and graph algorithms and also covers RISC V open source instruction sets It briefly describes the system design methodology based on DSAs and presents the latest research results in academia around domain specific acceleration architectures Providing cutting edge discussion of big data and artificial intelligence scenarios in contemporary industry and typical DSA applications this book appeals to industry professionals as well as academicians researching the
