**Development and Validation of Analytical Methods** Christopher M. Riley, Thomas W. Rosanske, 1996-05-29 The need to validate an analytical or bioanalytical method is encountered by analysts in the pharmaceutical industry on an almost daily basis because adequately validated methods are a necessity for approvable regulatory filings What constitutes a validated method however is subject to analyst interpretation because there is no universally accepted industry practice for assay validation This book is intended to serve as a guide to the analyst in terms of the issues and parameters that must be considered in the development and validation of analytical methods In addition to the critical issues surrounding method validation this book also deals with other related factors such as method development data acquisition automation cleaning validation and regulatory considerations The book is divided into three parts Part One comprising two chapters looks at some of the basic concepts of method validation Chapter 1 discusses the general concept of validation and its role in the process of transferring methods from laboratory to laboratory Chapter 2 looks at some of the critical parameters included in a validation program and the various statistical treatments given to these parameters Part Two Chapters 3 4 and 5 of the book focuses on the regulatory perspective of analytical validation Chapter 3 discusses in some detail how validation is treated by various regulatory agencies around the world including the United States Canada the European Community Australia and Japan This chapter also discusses the International Conference on Harmonization ICH treatment of assay validation Chapters 4 and 5 cover the issues and various perspectives of the recent United States vs Barr Laboratories Inc case involving the retesting of samples

Part Three Chapters 6-12 covers the development and validation of various analytical components of the pharmaceutical product development process. This part of the book contains specific chapters dedicated to bulk drug substances and finished products, dissolution studies, robotics and automated workstations, biotechnology products, biological samples, analytical methods for cleaning procedures and computer systems, and computer-aided validation. Each chapter goes into some detail describing the critical development and related validation considerations for each topic. This book is not intended to be a practical description of the analytical validation process but more of a guide to the critical parameters and considerations that must be attended to in a pharmaceutical development program. Despite the existence of numerous guidelines, including the recent attempts by the ICH to be implemented in 1998, the practical part of assay validation will always remain to a certain extent a matter of the personal preference of the analyst or company. Nevertheless, this book brings together the perspectives of several experts having extensive experience in different capacities in the pharmaceutical industry in an attempt to bring some consistency to analytical method development and validation.

**Analytical Method Validation and Instrument Performance Verification** Chung Chow Chan, Y. C. Lee, Herman Lam, Xue-Ming Zhang, 2004-04-09. Validation describes the procedures used to analyze pharmaceutical products so that the data generated will comply with the requirements of regulatory bodies of the US, Canada, Europe, and Japan. Calibration of Instruments describes the process of fixing, checking, or correcting the graduations of instruments so that they comply with those regulatory bodies. This book provides a thorough explanation of both the fundamental and practical aspects of biopharmaceutical and bioanalytical methods validation. It teaches the proper procedures for using the tools and analysis methods in a regulated lab setting. Readers will learn the appropriate procedures for calibration of laboratory instrumentation and validation of analytical methods of analysis. These procedures must be executed properly in all regulated laboratories, including pharmaceutical and biopharmaceutical laboratories, clinical testing laboratories, hospitals, medical offices, and in food and cosmetic testing laboratories.

With comprehensive step-by-step instructions, practical recommendations, standard operating procedures (SOPs), checklists, templates, and graphics for easy incorporation in a laboratory. This title

*Guidelines for Performance Criteria and Validation Procedures of Analytical Methods Used in Controls of Food Contact Materials*, 2009. Test methods for materials and articles in contact with foodstuffs are required to determine the concentration of residues of monomers in the materials themselves or to determine the concentration of individual or groups of substances in food or food simulants which have migrated from the food contact materials. The Community Reference Laboratory and National Reference Laboratories for food contact materials (FCM) prepared the present Guidelines to illustrate the required performance criteria for the analytical methods applied in the laboratories for FCM and provide procedures for method validation in order to estimate their

performance characteristics The scope of these guidelines is to provide rules for the performance of the analytical methods to be used in the verification of compliance with the migration limits defined in Directive 2002/72/EC as amended and in accordance with Directive 82/711/EEC as amended and others defined in the European legislation in order to ensure the quality and comparability of the analytical results The document presents 4 approaches according to the different purpose of performance assessment These guidelines are intended as a dynamic document and they will evolve and expand into further editions This is the first edition These guidelines have been endorsed by the European Union official Network of National Reference Laboratories and approved by the EU Commission competent service DG SANCO This work also highlights an important deliverable for the Network of NRLs In particular the members of the task force Method Performance that have dedicated time and effort to provide input into the development of these guidelines They are gratefully acknowledged here for their contribution NRL BE Fabien Bolle Tina n Goy NRL DE Oliver Kappenstein NRL DK Jens Petersen NRL ES Juana Bustos NRL FR1 Patrick Sauvegrain NRL EL Timokleia Togkalidou NRL IT Maria Rosaria Milana NRL NL Durk Schakel Dita Kalsbeek van Wijk NRL PL Kazimiera Cwiek Ludwicka NRL SI Viviana Golja NRL UK Emma Bradley Special thanks are extended to Emma Bradley for her contribution to the editing of the document
