*Branes and DAHA Representations* Sergei Gukov,Peter Koroteev,Satoshi Nawata,Du Pei,Ingmar Saberi,2023-08-28 In recent years there has been an increased interest in exploring the connections between various disciplines of mathematics and theoretical physics such as representation theory algebraic geometry quantum field theory and string theory One of the challenges of modern mathematical physics is to understand rigorously the idea of quantization The program of quantization by branes which comes from string theory is

explored in the book This open access book provides a detailed description of the geometric approach to the representation theory of the double affine Hecke algebra DAHA of rank one Spherical DAHA is known to arise from the deformation quantization of the moduli space of  $SL(2, \mathbb{C})$  flat connections on the punctured torus The authors demonstrate the study of the topological A model on this moduli space and establish a correspondence between Lagrangian branes of the A model and DAHA modules The finite dimensional DAHA representations are shown to be in one to one correspondence with the compact Lagrangian branes Along the way the authors discover new finite dimensional indecomposable representations They proceed to embed the A model story in an M theory brane construction closely related to the one used in the 3d/3d correspondence as a result modular tensor categories behind particular finite dimensional representations with  $PSL(2, \mathbb{Z})$  action are identified The relationship of Coulomb branch geometry and algebras of line operators in 4d  $N=2$  theories to the double affine Hecke algebra is studied further by using a further connection to the fivebrane system for the class S construction The book is targeted at experts in mathematical physics representation theory algebraic geometry and string theory This is an open access book

**ICT Diffusion and Environmental Sustainability, 2nd edition** Muhammad Majeed, Mara Madaleno, Muhammad Tayyab Sohail, 2025-09-16 Recently the adoption of information and communication technologies ICT has increasingly been recognized as crucial for economic prosperity human development and well being along with sustainable development World Summit on the Information Society WSIS Forum emphasizes the role of ICT adoption in sustainability with due regard to the 2030 Agenda for Sustainable Development The research has largely documented favorable economic outcomes of increasing the use of ICT However the ecological dimensions of ICT have received the least attention in the literature In effect ICT has influenced human life from many perspectives including ecological aspects of life The links of ICT with the environment are rather complex On the one hand ICT growth deteriorates the environment by increasing the production use and disposal of ICT products For instance increasing e waste and larger use of energy in manufacturing cause adverse effects on the environment The life cycle theory of ICT suggests that several stages of the life

of ICT result in pollution The life cycle of ICT related products spans over production delivery transport use and disposal On the other hand ICT is considered a solution to reinforce environmental protection mitigate the adverse impacts created in the environment by human activities and address key environmental challenges such as climate change and sustainability This Research Topic aims to invite world class cutting edge research on how individuals businesses societies and governments adopt various types of ICT for enhancing diverse forms of economic and environmental sustainability i e ecological economic social cultural and political Particularly this Research Topic is devoted to addressing scholars from social sciences business studies energy research economics research and environmental fields of research who are willing to combine strong theoretical underpinnings and world class empirical evidence Since the association between ICT diffusion and environmental sustainability is relatively new less focused and evolving there is a great need of understanding how ICT development can be harnessed for a thriving economy that takes care of its environmental impact We welcome submissions on the topics listed below Exploring the role of ICT in green growth prospects Analysing the role of ICT development for environmental sustainability Conceptualizing and exploring the role of ICT in the clean energy transition Analysing the strengths of alternative measures of ICT Analysing the role of smart cities for sustainability concerns ICT diffusion for designing facilitating and fostering sustainable economic performance Internet of things blockchain big data cloud computing and smart technologies for sustainable development
