Many do you think the profit margin for Anagene's cartridges has been fluctuating? Is there attributable to the actual number of cartridges sold or the change in the number of cartridges sold? What are you trying to calculate the cost?

The actual number of cartridges sold has changed. The company looked at the actual number of cartridges produced and reduced the quantity of the cartridges sold. entity **Exhaustive analysis of scalp hair regression: subjective and objective perception from initial hair loss to severe miniaturisation and drug-induced regrowth** Dominique Van Neste, 2021-03-18 Aim The reason why non calibrated hair variables poorly estimate scalp hair coverage during hair growth studies was studied Methods Hair productivity integrates density diameter and daily hair growth rate Cross sectional studies have established hair productivity in female and male patients 480 vs 90 controls with self evaluation of hair loss phototrichogram CE PTG EC and scalp coverage scoring SCS Tracking productivity of individual hair follicular units from longitudinal studies challenged the application of our methods during drug trials Results Hair loss means decreased productivity and increased time to complete coverage The hair mass index HMI linearly connects productivity with clinical perception of coverage i.e. SCS The ensuing HMI abacus translates independently of gender age pattern or severity and unravels unequal intervals between categories of the Ludwig and Hamilton classifications With one severity grade shift time to complete coverage varied from 21 to 51 days i.e. no equality During longitudinal studies SCS detected improved productivity reflecting clinically relevant responses but remained stable in the absence of significant productivity variations Follicular unit labelling and individual hair growth tracing showed that reversal of miniaturised hair follicles does not play a major role during drug induced hair regrowth The latter reflects re activation of resting dormant terminal hair follicles The recovered productivity would not be possible once hair follicles enter the phase of structural functional irreversible miniaturisation Conclusion Besides pattern identification density of nanohair and HMI appear as innovative diagnostic approaches Abrupt transformation within one cycle of terminal hair follicles into miniaturised ones and its reversal as the effect of active FDA approved drugs remain highly improbable
