

# Applet

- Applets are small Java applications that can be accessed on an Internet server, transported over Internet, and can be automatically installed and run as a part of a web document.
- Applet is a special type of program that is embedded in the webpage to generate the dynamic content.
- It runs inside the browser and works at client side.
- An applet can be a fully functional Java application
- After a user receives an applet, the applet can produce a graphical user interface.
- It has limited access to resources so that it can run complex computations without introducing the risk of viruses or breaching data integrity.
