Campbell, 1986 **IUTAM Symposium Transsonicum IV** H. Sobieczky, 2012-12-06 Symposium Transsonicum was founded by Klaus Oswatitsch four decades ago when there was clearly a need for a systematic treatment of flow problems in the higher speed regime in aeronautics The first conference in 1962 brought together scientists concerned with fundamental problems involving the sonic flow speed regime Results of the conference provided an understanding of some basic transonic phenomena by proposing mathematical methods that allowed for the development of practical calculations The Transonic Controversy about shock free flows was still an open issue after this meeting In 1975 the second symposium was held by then there was much understanding in how to avoid shocks in a steady plane flow to be designed but still very little was known in unsteady phenomena due to a lack of elucidating experiments A third meeting in 1988 reflected the availability of larger computers which allowed the numerical analysis of flows with shocks to a reasonable accuracy Because we are trying to keep Oswatitsch's heritage in science alive especially in Gottingen we were asked by the aerospace research community to organize another symposium Much had been achieved already in the knowledge technology and applications in transonics so IUTAM had to be convinced that a fourth meeting would not just be a reunion of old friends reminiscing some scientific past The scientific committee greatly supported my efforts to invite scientists actively working in transonic problems which still pose substantial difficulties to aerospace and turbomachinery industry Computational Methods in Viscous Aerodynamics T.
