To protect the finish, keep bollards in original packaging until exact moment of installation.

Once scratched, bollards cannot be repaired to original form without re-finishing the entire surface.

Consider local soil conditions before proceeding with bollard installation.

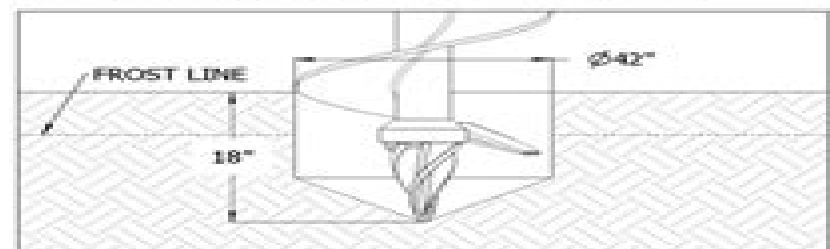

### Before Installation

**STEP 1:** Always check for hazards such as water pipes, gas lines, and underground wiring before digging.

**STEP 2:** Study the site plans and mark the precise center point of each bollard.

**STEP 3:** Please consult your local Building Code Department to determine the recommended depth below the frost line for digging in your area. Choose a minimum of this or 18", whichever is greater. This is the total depth for digging. The diameter of the hole should extend to a minimum of 42". *Note: If you have specific impact requirements, please consult your local civil engineer.*

**STEP 4:** Center the auger on the installation mark and bore a hole to the required depth and diameter.
