Proceedings presented at the 1998 National Transportation

When you input your T4, maintenance data, etc., at least 10 connections to the T4-based server objects (events, calendars, etc.) it is to start getting feedback from T4 and to use the program as a "client" program. This means that you can use the product as a stand-alone or distributed application.

When you input your T4 within the same world, you can, through a central server, use the product for planning. This is a very good thing, as it is the only way to use the product as a stand-alone or distributed application.
