Chen,2013-01-09 While the books in this series are primarily designed for AMC competitors they contain the most essential
and indispensable concepts used throughout middle and high school mathematics Some featured topics include key concepts
such as equations polynomials exponential and logarithmic functions in Algebra various synthetic and analytic methods used
in Geometry and important facts in Number Theory The topics are grouped in lessons focusing on fundamental concepts
Each lesson starts with a few solved examples followed by a problem set meant to illustrate the content presented At the end
the solutions to the problems are discussed with many containing multiple methods of approach I recommend these books to
not only contest participants but also to young aspiring mathletes in middle school who wish to consolidate their
mathematical knowledge I have personally used a few of the books in this collection to prepare some of my students for the
AMC contests or to form a foundation for others By Dr Titu Andreescu US IMO Team Leader 1995 2002 Director MAA
