Categories for the Working Philosopher Elaine M. Landry, 2017 This is the first volume on category theory for a broad philosophical readership. It is designed to show the interest and significance of category theory for a range of philosophical interests: mathematics, proof theory, computation, cognition, scientific modelling, physics, ontology, the structure of the world. Each chapter is written by either a category theorist or a philosopher working in one of the represented areas in an accessible way that builds on the concepts that are already familiar to philosophers working in these areas. *El-Hi*
